<b>Default actions</b>	<p>In order to stay on top of malware, Windows Defender (or any similar tool) needs to have an updated list of definitions to look out for. The definition packs that are downloaded by Windows Update contain default instructions to follow when a high, medium, or low alert item has been found. However, each of these threat categories are customizable in that you can choose to ignore or remove a threat when found instead of following the directions from Windows Update:</p>  <p>Choose the action that you want to display or apply when items with these alert levels are detected. <a href="#">What are actions and alert levels?</a></p> <p>Severe alert items: Recommended action based on definitions</p> <p>High alert items: Recommended action based on definitions</p> <p>Medium alert items: Recommended action based on definitions</p> <p>Low alert items: Recommended action based on definitions</p> <p><input type="checkbox"/> Apply recommended actions Help protect this computer by applying recommended actions after items are detected.</p>
<b>Real-time protection</b>	<p>Windows Defender operates in the background but is by default designed to keep watch over all activities on your computer in order to keep it safe. However, you can make Windows Defender rule with an iron fist or only alert you to certain changes on your computer:</p>  <p><input checked="" type="checkbox"/> Use real-time protection (recommended) Choose which security agents you want to run. <a href="#">Understanding real-time protection</a></p> <p><input checked="" type="checkbox"/> Scan downloaded files and attachments</p> <p><input checked="" type="checkbox"/> Scan programs that run on my computer</p>
<b>Excluded files and folders</b>	<p>Use the Add button to define folder locations that will not be scanned:</p>
