Atmosphere, Ocean and Climate Dynamics John Marshall, R. Alan Plumb, 2007-12-19 For advanced undergraduate and beginning graduate students in atmospheric oceanic and climate science Atmosphere Ocean and Climate Dynamics is an introductory textbook on the circulations of the atmosphere and ocean and their interaction with an emphasis on global scales It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way The role of the oceans in climate and paleoclimate is also discussed The combination of observations theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography Written at a mathematical level that is appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material *Small Scale Processes in Geophysical Fluid Flows* Lakshmi H. Kantha, Carol Anne Clayson, 2000-08-07 While ocean waves are the most visible example of oceanic mixing processes this macroscale mixing process represents but one end of the spectrum of mixing processes operating in the ocean At the scale of a typical phytoplanktonic diatom or larval fish inhabiting these seas the most important mixing processes occur on the molecular scale at the scale of turbulence Physical biological interactions at this scale are of paramount importance to the productivity of the seas fisheries and the heat balance that controls large scale ocean climate phenomena such as El Niño and tornadoes This book grew out of the need for a comprehensive treatment of the diverse elements of geophysical fluid flow at the microscale Kantha and Clayson have arranged a logical exposition of the various mixing processes operating within and between the oceans and its boundaries with the atmosphere and ocean floor The authors intent is to develop a volume that would provide a comprehensive treatment of the fundamental elements of ocean mixing so that students academics and professional fluid dynamicists and oceanographers can access this essential information from one source This volume will serve as both a valuable reference tool for mathematically inclined limnologists oceanographers and fluid modelers Simple models of oceanic and atmospheric boundary layers are discussed Comprehensive and up to date review Useful for graduate level course Essential for modeling the oceans and the atmosphere Color Plates
