Observing Complexity Systems Theory And Postmodernity:

Observing Complexity William Rasch, Cary Wolfe, The rubric of systems theory brings together conceptual models and approaches in the sciences and social sciences that study complexity It attempts to provide a coherent means of describing all systems whether organic or inorganic and offers a theory of knowledge that can account for the integration of humans in the social informational and ecological systems in which we are enmeshed An introduction to the major concepts and foremost thinkers of systems theory this book brings systems theory into interaction with the major figures of postmodern theory The format is multiplex and open a rich montage including interviews exemplary essays and staged dialogues Throughout the writers aim is not to solidify theory but to provide a thorough explication and an open ended exploration of how systems theory can address in a fresh and productive way theoretical questions that too often have led to impasses between different schools of postmodern theory

Observing Complexity William Rasch, Cary Wolfe, 2000 Brings the major concepts and foremost thinkers of systems theory into interaction with the major figures of postmodern theory The format is multiplex and open a rich montage including interviews exemplary essays and staged dialogues

Bridging Complexity and Post-Structuralism Minka Woermann, 2016-09-27 This work addresses the topic of philosophical complexity which shares certain assumptions with scientific complexity cybernetics and General Systems Theory but which is also developing as a subject field in its own right Specifically the post structural reading of philosophical complexity that was pioneered by Paul Cilliers is further developed in this study To this end the ideas of a number of contemporary French post structural theorists and their predecessors including Derrida Nancy Bataille Levinas Foucault Saussure Nietzsche Heidegger and Hegel are introduced The implications that their various insights hold for our understanding of complex human systems are teased out at the hand of the themes of economy social ontology subjectivity epistemology and ethics The analyses are also illuminated at the hand of the problematic of the foreigner and the related challenges of showing hospitality to foreigners The study presents a sophisticated account of both philosophical complexity and philosophies of difference By relating these subject fields the study also extends our understanding of philosophical complexity and offers an original characterisation of the aforementioned philosophers as complex thinkers

Critical Complexity Rika Preiser, 2016-01-15 This book is a collection of all the single authored essays by Paul Cilliers published between 1990 2011 Being one of few authors who approached the study of complexity from a philosophical perspective the main themes in these papers explore Qualitative characterization of complexity and the normative implications of studying complex adaptive systems the philosophical and conceptual similarity to post structural approaches how any engagement with complexity leads to a critical engagement with how we do science and design interventions critical and normative implications for how to engage with complex socio political concerns in the world What makes this book unique is that it consolidates a body of work that is distributed over a wide range of academic journals Although his book *Complexity and Postmodernism* Routledge 1998 remains a cornerstone in

the field of complexity studies Cilliers journal essays really explore the application of the theoretical concepts in more depth His ground breaking ideas conceptualized in these essays have served as a continual source of novelty and inspiration in the process of applying complexity thinking to other fields of study

Niklas Luhmann: Law, Justice, Society Andreas Philippopoulos-Mihalopoulos, 2009-09-10 This is the first book to consider German sociologist Niklas Luhmann's social theory in a critical legal context His theory is introduced here both in terms of society at large and the legal system specifically and the book reveals the aporetic structure of autopoiesis aligning it with postmodern approaches to law Readers will find it operates both as an introduction to the relevance of Luhmann's social theory for law as well as a critical response to autopoiesis

On the (Im)Possibility of Business Ethics Minka Woermann, 2012-11-02 Corporations and the environments in which they operate are complex with changing multiple dimensions and an inherent capacity to evolve qualitatively A central premise of this study is that a postmodern reading of ethics represents an expression of and an engagement with the ethical complexities that define the business landscape In particular the deconstructive philosophy of Jacques Derrida offers a non trivial reading of a complex notion of ethics and thereby helps us to develop the skills necessary to critique and intervene in our practices and to develop robust strategies for living in the absence of prescriptive ethical frameworks Although a central premise of this study is that substantive ethical claims can only be generated within a given context the study nevertheless presents readers with a meta position that illustrates the type of considerations that should inform ethical reflection from a complexity perspective In order to illustrate the value that this meta position holds for business ethics these considerations are explored in terms of the implications that they hold for our understanding of corporate social responsibility for the practice of responsible management and leadership practices and for teaching business ethics

Cybernetic Capitalism Jan Overwijk, 2025-01-07 This book offers a conceptual interrogation of how capital navigates its cybernetic environment Taking an immanent perspective the book develops a unique synthesis between Niklas Luhmann's systems theory and the critical theory tradition Overwijk shows how neoliberal capitalism's version of rationalization depends on the organization and management of society on the basis of cybernetic principles Overwijk seeks to update earlier critiques of cybernetic capitalism that stressed the system's colonization of its environment its making the entirety of social life communicable Under today's cybernetic rationalization things are radically different Neoliberal political economy aims to incite the incalculability of the market platform capitalists venture to capitalize on the unpredictable efforts of their users and post Fordist management seeks to encourage the creativity of service workers As this book uniquely shows capital no longer aims at total communicability but instead seeks to provoke and exploit the incommunicability of its environment In this sense it offers an ecological theory of capitalism laying conceptual the groundwork for understanding the extractivist logic of the Anthropocene Cybernetic Capitalism shows how the cultural obsession with incommunicability that animates cybernetic rationalization has taken an irrationalist turn resurfacing in the mysticism of conspiracy theory and radical right politics The

book offers a novel and compelling materialist interpretation of today's paradoxical connections between neoliberal rationalism and radical right irrationalism *Reframing Complexity* Fritjof Capra, 2007 Havana's Instituto de Filosofía's First Biennial International Seminar on the Philosophical Epistemological and Methodological Implications of Complexity Theory was held in January 2002 in Havana Cuba's capital city The seminar was aimed at familiarizing Cuban researchers and professors in a more direct way with some of the current trends and widespread scope of the expanding field of complexity thinking affording them the possibility of personal contacts with some of the people engaged in that effort The seminar was attended by specialists from fifteen countries ranging from Chile to Australia along the West East axis and from Norway to South Africa along the North South one There were participants from developed and underdeveloped countries This book contains selected papers from the Complexity 2002 seminar edited by Fritjof Capra author of *The Tao of Physics* *The Web of Life A New Scientific Understanding of Living Systems* and *The Hidden Connections A Science for Sustainable Living* Alicia Juarrero author of *Dynamics in Action* Pedro Sotolong and Jacco van Uden author of *Complexity and Organization* The papers have been organized in four parts I Sources of Complexity Science and Information II Philosophical Epistemological and Methodological implications III Organizational Implications IV Global and Ethical Implications The papers in Part I can be said to approach the phenomenon of complexity at a very basic level Here the issues being addressed revolve around the very fundamental question of why the complexity sciences are so important What are the most fundamental lessons to be learned from studying complex systems Papers included in Part II engage in a broader philosophical investigation of some of the most general ontological epistemological and methodological implications of the complexity approach showing how very old questions are currently being reformulated and or reinterpreted in the light of complexity thinking Papers that appear in Part III address various important issues about the links between complexity and social organizational business and management questions Finally Papers in Part IV return once again to more global implications of Complexity thinking this time dealing with Ethical and Globalization issues of contemporary world

Thinking Complexity Paul Cilliers, 2007 This volume examines the impact of complexity theory on various disciplines especially the area of philosophy Philosophy **Environment & Planning** , 2006 **The Form of the System** Daniel Leonard Cristiani, 2003 **Contemporary Literature and Emergent Space** Gregory Dean Nicholson, 2007 **Ecological Communication and Theories of the "outside" in Romantic Poetry** Louise Economides, 2003 **Encyclopedia of Science and Religion** Jacobus Wentzel Van Huyssteen, 2003 A multidisciplinary approach that addresses all aspects of the dialogue between the sciences and the world's religions reaching into the humanities as well as into the physical sciences and technology Examines controversial issues such as human cloning and stem cell research long with more traditional questions such as the origins of life the nature of sin and the philosophy of science and religion 4 volumes **Studia Universitatis Babeş-Bolyai** , 2010 *The Moral Fool* Hans-Georg Moeller, 2009 Justice equality and righteousness these

are some of our greatest moral convictions Yet in times of social conflict morals can become rigid making religious war ethnic cleansing and political purges possible Morality therefore can be viewed as pathology a rhetorical psychological and social tool that is used and abused as a weapon An expert on Eastern philosophies and social systems theory Hans Georg Moeller questions the perceived goodness of morality and those who claim morality is inherently positive Critiquing the ethical fanaticism of Western moralists such as Immanuel Kant Lawrence Kohlberg John Rawls and the utilitarians Moeller points to the absurd fundamentalisms and impracticable prescriptions arising from definitions of good Instead he advances a theory of moral foolishness or moral asceticism extracted from the amoral philosophers of East Asia and such thinkers as Ludwig Wittgenstein and Niklas Luhmann The moral fool doesn't understand why ethics are necessarily good and he isn't convinced that the moral perspective is always positive In this way he is like most people and Moeller defends this foolishness against ethical pathologies that support the death penalty just wars and even Jerry Springer's crude moral theater Comparing and contrasting the religious philosophies of Christianity Daoism and Zen Buddhism Moeller presents a persuasive argument in favor of amorality **Environment and Planning** ,2001 *The Arizona Quarterly* ,1999

Aging, Globalization, and Inequality Jan Baars,2006 Focuses on the variety of ways in which age and ageing are socially constructed and the extent to which growing old is being transformed through processes associated with globalisation This book provides the basis for a modern type of critical gerontology relevant to the twenty first century
