achievement scores on the NWEA MAP tests after being taught material aligned to the new North Dakota Mathematics Content Standards based on Common Core State Standards I also wanted to know how students felt about the different teaching styles used in the classroom when they had to do activities and assignments aligned to the new standards Each student kept a journal to keep track of their thoughts and feelings on how things were going in the classroom Students were exposed to new activities and teaching strategies to help them better understand the material being taught The activities and teaching strategies also helped students make connections between the real world and the classroom content being taught These new activities or rich tasks were to help students better understand the material being taught The students total change in mathematics achievement was measured as well as their percentage of change and the class average change of mathematics achievement scores The NWEA data was collected from the Fall 2012 Spring 2013 Fall 2013 and Spring 2014 NWEA MAP tests as these tests were aligned to the Common Core There were some improvements in student growth but there were some apprehensiveness from the students towards the different teaching and testing strategies

*2015 NWEA Measures of Academic Progress Normative Data* Northwest Evaluation Association, 2015 By using carefully constructed measurement scales that span grades Measures of Academic Progress MAP interim assessments from Northwest Evaluation Association NWEA offer educators efficient and very accurate estimates of student achievement status within a subject Before achievement test scores can be useful to educators however they need to be evaluated within a context The RIT Scale is a curriculum scale that uses individual item difficulty values to estimate student achievement An advantage of the RIT scale is that it can relate the numbers on the scale directly to the difficulty of items on the tests In addition the RIT scale is an equal interval scale Equal interval means that the difference between scores is the same regardless of whether a student is at the top bottom or middle of the RIT scale and it has the same meaning regardless of grade level To that end 2015 RIT Scale Norms allow educators to compare achievement status and changes in achievement status growth between test occasions to students performance in the same grade at a comparable stage of the school year This contextualizing of student performance

- 1 helps teachers as they plan instruction for individual students or confer with parents
- 2 supports school and district administrators as they focus on allocating resources and
- 3 empowers school staff as they work to improve all educational outcomes

The 2015 NWEA RIT Scale Norms Study provides status and growth norms for individual students as well as for schools on each of the four RIT scales Reading Language Usage Mathematics and General Science The study's results are based on K 11 grade level samples Each sample is comprised of 72 000 to 153 000 student test records from approximately 1000 schools These numbers vary by subject These samples were drawn randomly from test record pools of up to 10 2 million students attending more than 23 500 public schools spread across 6 000 districts in 49 states Rigorous procedures were used to ensure that the norms were representative of the U S school age population Since MAP assessments can be administered on a schedule designed to meet a school's needs tests can be administered at any time during the school

year The 2015 norms adjust for this scheduling flexibility by accounting for instructional days allowing more valid comparisons for status and growth

**NWEA FAQ** Northwest Evaluation Association, 2015 Northwest Evaluation Association NWEA conducts norming studies every several years to provide the best and most up to date information we can about student achievement and growth to better support educational decision making It is an important part of our commitment to our partners The most recent NWEA norms were released in July 2015 Just as we expect student performance to change with time norms of student performance will change correspondingly For 2015 several factors may have influenced how the US school age population performed on Measures of Academic Progress MAP assessments of language usage mathematics and reading over the 2011 12 2012 13 and 2013 14 school years Prominent among these possible factors are the introduction of Common Core instruction and Common Core versions of MAP But as with all empirical studies changes in scope and data necessitated changes in statistical design and analyses The methodological improvements introduced in the 2015 norms have resulted in a set of norms that are more representative of the US school age population than previous NWEA norms Methodological changes involved differences in the way post stratification weights were developed and the way growth was modeled Details of these changes are addressed more thoroughly in the 2015 Norms Study As a result of the improved methodology partners can expect some differences from previous norms as explained below

*The Relationship Between NWEA Scores of Resident and Non-resident Students* Steve Prissel, 2016 The purpose of this study was to examine whether a relationship exists between the Northwest Evaluation Association NWEA scores of school of choice students and resident students Background factors were also considered in the study with focus on grade gender race and special education and socioeconomic status of the students The study included 5 975 students from 14 school districts in one Michigan intermediate school district ISD The NWEA computer adaptive test assessed achievement progress in math and reading in grades 3 8 This study used pre and post assessments once in the fall and once in the spring to assess the level of achievement growth Students in this study completed the math and reading portions of the NWEA during the 2014 15 school year A quantitative correlational design was used in this study to show the relationship if any between NWEA math and reading scores of school of choice SOC and resident students What was the relationship between students residency status and math and reading achievement as measured by NWEA and What was the relationship between students residency status and math and reading achievement as measured by NWEA after controlling for background factors These guiding questions and this research are important because of growing nationwide concerns by parents policy makers and school leaders about the educational value of school choice and the competition for per pupil funding based the school district s ability to attract and retain out of district students Maintaining high achievement scores is critical This study concluded that the grade level of the student was impactful to achievement scores but the SOC status was not

[RIT Stability Through the Transition to Common Core-Aligned MAP' Tests. How Using MAP to Measure Student Learning Growth is Reliable Now and in 2014](#)

Northwest Evaluation Association, 2013 While many educators expect the Common Core State Standards CCSS to be more rigorous than previous state standards some wonder if the transition to CCSS and to a Common Core aligned MAP test will have an impact on their students RIT scores or the NWEA norms MAP assessments use a proprietary scale known as the RIT Rasch unit scale to measure student achievement and growth The RIT scale based on item response theory IRT has been used since the late 1970s by NWEA and is a proven stable scale for educational assessment The principle behind the RIT scale is simple Test questions vary in difficulty and can be given a score on the RIT scale A student's achievement level can then be measured on the same scale by referencing the questions they were able to answer correctly Every item in MAP tests is calibrated against one of the stable RIT scales Reading Language Math or Science Student responses on these items are used to generate a final RIT score for each student An individual item with its associated RIT value may appear in tests aligned to various learning standards such as state standards and the Common Core State Standards Regardless of the standards alignment of a particular test a given item has a single RIT value associated with it This RIT value is obtained using a rigorous calibration process in which each item is field tested with thousands of students across the nation The purpose of MAP tests is to measure growth by examining RIT scores over time If two different MAP tests are on the same scale e.g. Math and measure similar constructs then scores for these two tests can be compared directly MAP tests aligned to CCSS as well as other state standards state aligned on a given scale measure similar constructs due to the high degree of content overlap among learning standards This underlying design of MAP tests is critical to ensuring that RIT scores carry the same meaning in terms of student ability regardless of which test was used to obtain them Because the RIT scales are independent of standards alignment transitioning between two tests is not anticipated to have a significant impact however States that are transitioning or who have already transitioned to teaching the CCSS and are working to understand the gap between their state standards and what's required by the CCSS are seeing some key shifts Those shifts are detailed in this report and questions and answers are provided Individual Growth and School Success Martha S. McCall, 2004
