High Performance and Hardware Aware Computing Rainer Buchty, 2008 *Proceedings of 17th International Conference on Machine Learning and Computing* Lin Huang, David Greenhalgh, 2025-08-17 This book comprises original and peer-reviewed research papers presented at the 2025 17th International Conference on Machine Learning and Computing that was held in Guangzhou, China, from February 14 to 17, 2025. The focus of the conference is to establish an effective platform for institutions and industries to share ideas and to present the works of scientists, engineers, educators, and students from all over the world. Topics discussed in this volume include Machine Learning Theory and Algorithms, High performance Computing Models and Data Processing, Large scale Language Models and Natural Language Processing, Data oriented Information System Optimization and Intelligent Computing, AI based Intelligent Control Systems and System Security, etc. The book will become a valuable resource for academics, industry professionals, and engineers working in the related fields of machine learning and computing.

Practical Machine Learning: From Pictures to the Cloud 2025
AUTHOR:1-Praneet Amul Akash Cherukuri AUTHOR:2-Dr. Santosh Kumar Henge, PREFACE The past decade has moved machine learning from academic curiosity to an invisible utility pulsing through every photograph we snap and every swipe we make. A face unlocks a phone, a drone inspects a bridge, a doctor consults an algorithm before a diagnosis, all powered by models that see, learn, and act in real time. Yet for students and engineers stepping into the field, the journey from inquisitive 'Hello world' notebook to a production-grade model running on an edge device or a cloud endpoint can feel disjointed and opaque. Practical Machine Learning: From Pictures to the Cloud was born of that gap. In our classrooms and industry collaborations at S R University, we watched learners master isolated concepts: convolutional layers, hyperparameter tuning, REST APIs, without a blueprint that tied them together. This book offers that blueprint. We start with raw pixels, guide you through feature engineering and modern deep learning architectures, and then scale the conversation outward: how to train responsibly, deploy at cloud scale, monitor for drift, and govern for fairness and privacy. What makes the text practical is its bias toward end-to-end reproducibility. Every chapter couples theory with hands-on labs drawn from real engagements in health care, smart cities, retail, and autonomous systems. Code examples ship as containerised notebooks, pipeline diagrams

map directly to the managed services of AWS Google Cloud Azure and open source stacks like Kubeflow and Feast Whether your workstation is a laptop or a GPU cluster you can follow the same lifecycle we use in production Equally vital is the ethical lens threaded throughout As image models grow more capable they also magnify risks bias surveillance ecological cost You will find checklists case studies and policy references alongside optimisation tricks because robustness and responsibility are no longer optional extras they are success criteria The book is organised in three movements 1 Seeing fundamentals of image data classical vision and modern convolutional transformer networks 2 Learning advanced training techniques transfer learning hyper parameter tuning and explainability 3 Serving scalable pipelines cloud deployment edge inference monitoring cost governance and compliance Our intended audience spans senior undergraduates graduate students and practitioners who know basic Python and linear algebra but want to take the leap into full stack machine learning engineering We owe gratitude to our students whose incisive questions shaped the narrative and to industry partners who opened their architectures for case studies Any errors that remain are ours alone We hope this book becomes your desk companion as you turn pixels into insights and models into value responsibly reproducibly and at scale Authors
