Engaging Undergraduate Mental Health Nursing Students in Recovery Orientated Practice Through Service User Involvement: a Mixed Methods Study Siobhan Russell, 2014 Introduction and Background Current mental health policy is committed to the involvement of service users both in mental health service delivery and in the education of health care professionals However this is an under researched area that requires further attention to understand the potential effect of service user involvement on student s clinical practice and the influence it has on student s perceptions of service users and mental illness Aims and Objectives The aim of the current study was to establish the extent and examine the perceived effect of service user involvement in undergraduate mental health nurse education in the Republic of Ireland The objectives were to 1 establish the national extent of service user involvement in the education of undergraduate mental health nurses 2 examine

students experiences of service user involvement in their education and 3 examine service users experiences of being involved in undergraduate mental health nurse education Design The current study adopted a two phased sequential mixed methods design In phase one a national survey was conducted with all 12 Departments of Nursing in educational institutions in the Republic of Ireland to establish the national extent of service user involvement in undergraduate mental health nursing programmes In phase two semi structured interviews were conducted with 18 students and four service users to explore their experiences of service user involvement Main Findings The findings from the national survey indicate that the extent of service user involvement in Irish undergraduate mental health nursing programmes varies to a large degree Some nursing departments welcome service user involvement not only in the theoretical delivery of their nursing programmes but also in areas of curriculum development and programme evaluations In contrast other departments have no service user involvement at any level with no future plans to incorporate it in any aspect of their programme The key qualitative findings indicated that the experience of service user involvement shifted the students focus away from the constraints imposed by a diagnosis and recognised the service user as a person with a wealth of expertise acquired through their personal experiences Following the integration of both data sets the following four sub themes also emerged learning from experiential knowledge delivered through narrative From practical to personal From illness to wellness a beacon of hope and Progression of practice The super ordinate theme that emerged was Service User Involvement A Journey towards Recovery Orientated practice Conclusion This study highlights that service user involvement in undergraduate mental health nurse education has the potential to be an influential factor in student s ability to adopt a recovery orientated approach to clinical practice Contemporary mental health policy strongly stipulates that recovery orientated practices need to be adopted by mental health nurses The current study indicates how the vision for recovery orientated practices could potentially be achieved through the involvement of service users in professional education **'Listen to Me, Now I'm Talking'** Fran Walsh,2015

orientated approach as outlined in A Vision for Change On average overall satisfaction was low with 42 percent of participants reporting a poor overall experience in the last two years However findings from the ordinal logistic regression indicated some ways in which service user experiences may be improved which are consistent with modern recovery orientated mental health care Alongside age the provision of individualised care plans accessible support in the form of a key worker service user involvement in decisions about their treatment and care and continuity of care were found to be significant predictors of service user satisfaction Calculated odds ratios showed for example that service users who reported having a written recovery care plan and those who reported being involved in decisions about the medications they take were 2.2 and 2.5 times more likely to report a good overall experience respectively Conclusion More work is needed if Ireland is to achieve the modern recovery orientated system envisaged in A Vision for Change more than a decade ago However key pillars of the recovery orientated approach such as individualised care planning and increased service user involvement have the potential to improve service user s experiences going forward

In Recovery Nora Jacobson,2004 For hundreds of years people diagnosed with mental illness were thought to be hopeless cases destined to suffer inevitable deterioration Beginning in the early 1990s however providers and policymakers in mental health systems came to promote recovery as their goal But what does recovery truly mean For example to consumers of mental health services it implies empowerment and greater resources dedicated to healing to HMOs it can suggest a means of cost savings when benefits cease upon recovery This book considers recovery from multiple angles Traditionally Nora Jacobson notes recovery was defined as symptom abatement or a return to a normal state of health but as activists mental health professionals and policymakers sought to develop recovery oriented systems other meanings emerged Jacobson s analysis describes the complexities of ideas that have defined recovery in various contexts over time The first meaning recovery as evidence involves the theories statistics therapies legislation and myriad other factors that constituted the first one hundred years of mental health services provision in the United States Recovery as experience brought the voices of patients into the conversation while recovery as ideology drew on both recovery as evidence and recovery as experience to rally support for specific approaches and service delivery models This in turn became the basis for recovery as policy which developed as assorted representative bodies such as commissions and task forces planned reforms of the mental health system Finally recovery as politics emerged as reformers confronted harsh economic realities and entrenched ideas about evidence experience and ideology Throughout Jacobson draws on her research in Wisconsin a state with a long history of innovation in mental health services Her study there included several years of fieldwork and interviews with the government appointed groups charged with making recovery policy Thus In Recovery also provides an inside account of the process of policy development and implementation
