

CR-4/CR-3 ■ Uncompromised performance with Nakamichi Discrete

The CR-4 and CR-3 Discrete Head Cassette Decks are designed for the true music enthusiast, the audiophile for whom nothing less than perfection is acceptable. These are the tangible results of more than 15 years' cassette recording research conducted by Nakamichi and available only from Nakamichi. The CR-4/CR-3 incorporate the three essentials of Nakamichi Cassette Technology: the Discrete Three-Head System which we created, our exclusive Asymmetrical Dual-Capstan Transport with Pressure-Pad Lifter, and our special electronics that perfectly match our recording and playback heads. The CR-4 differs from the CR-3 in that it features a Manual Calibration System to extract the last iota of performance from each tape, it uses a more exotic capstan motor to reduce wow and flutter to the vanishing point, and it is constructed on a copper-plated chassis which affords an extra measure of shielding against electromagnetic interference.

Discrete 3-Head Technology

Ever since Nakamichi created the world's first three-head cassette deck — the legendary Model 1000 — many have tried to match it. None have succeeded. Although many 3-head decks are available, most offer little more than an ability to "monitor" the tape — not the primary advantage of a 3-head system! A 3-head deck should be able to record and reproduce tapes of exceptional quality because, with separate record and play heads, each can be optimized for one specific task.

In this, the average 3-head deck fails to meet expectations. Most use "sandwich" heads in which record and play sections are in a common housing. Once the head is made, there's no way to align the gaps and without perfect magnetic alignment, response is seriously impaired. Furthermore, with both gaps in the same housing, record flux leaks into the play head where it affects playback quality and makes proper calibration impossible.

The CR-4 and CR-3 use physically discrete record and play heads that are aligned after installation to ensure flat response, maximum headroom, minimum noise and, in the case of the CR-4, accurate calibration. The heads are

individually shielded to prevent crosstalk and noise pickup and are wound with the finest oxygen-free-copper (OFC) wire to minimize loss. The laminated Crystalloy used in the R-3L and P2H-3L heads is the world's finest core material. Properly fabricated, it has extremely low core loss and exceptional flux-handling ability — which means low-noise playback and low-distortion recording. Our special record gap "focuses" magnetic energy to penetrate the full tape coating and achieve higher recording levels with less distortion. Our sub-micron play gap resolves

recordings to beyond 20 kHz while a special contour promotes long life and unusually smooth bass response.

Asymmetrical Dual-Capstan Transport

Nakamichi's Asymmetrical Dual-Capstan Transport is as different from ordinary dual-capstan drives as our Discrete 3-Head Recording System is from conventional 3-head designs. The capstans and flywheels used in the CR-4 and CR-3 are precision machined to different diameters, and the capstan surfaces are specially treated to improve their "grip" on the tape. The capstans rotate at different speeds in order to maintain proper tension in the tape as it contacts the heads. This "asymmetry" is not accidental. It is a purposeful part of the design in order to prevent common-mode resonance from being set up between the two capstans. Such resonances, when they occur, concentrate wow at specific frequencies and make it more audible than published specifications would suggest. The Nakamichi CR-4/CR-3 transport not only "measures" well, it sounds even better than it "measures!"

Our Asymmetrical Dual-Capstan Drive maintains such uniform tension in the tape as it passes the heads that the pressure pad in the cassette isn't needed to maintain tape-to-head contact. A unique "pressure-pad lifter" pushes it out of contact with the tape and eliminates the pad as a cause of speed instability. This dramatically reduces scrape flutter and modulation noise, two factors that do not appear in published specifications but have an extremely important effect on sound quality. In fact, the "thick" sound that characterizes many cassette recordings and differentiates them most obviously from CD reproduction is as much caused by scrape flutter and modulation noise as by any other factors. There is little doubt that the unusually clear transparent sound provided
