**Algae and Environmental Sustainability** Bhaskar Singh, Kuldeep Bauddh, Faizal Bux, 2015-12-22 This book presents the dynamic role of algae in a sustainable environment. Two major aspects namely bioenergy and bioremediation have been elaborated in various chapters contributed by scientists and teachers from different geographical areas throughout the world. Algal biofuels is an emerging area of equal interest to researchers, industries and policy makers working or focusing on alternative i.e. renewable fuels. Algae have been an area of interest due to their wide range of applications. Over the last 5 decades eukaryotic algae have been used in the aquaculture industry as feed for invertebrates providing a rich source of antioxidants, dietary fiber, minerals and protein. More recently there has been a focus on the use of algal biomass in the development of alternative fuels. The extraction of oil from algae has been widely explored as a much more viable feedstock than plant based oils in large scale fuel production using algae as feedstock has the advantages that it doesn't require arable land and that wastewater can be used as a source of nutrients in their culture. The multifunctional approach of algae includes pollution remediation, carbon sequestration, biofuels production and delivery of value added products. However, there are still some obstacles that need to be overcome to make their use as potential feedstock for biofuels technologically feasible. In order to maintain the sustainability aspect of algal biofuels various aspects have to be studied and critically analyzed to assess the long term sustainability of algal derived biofuels. This book discusses the role of algae as a promising future feedstock for biofuels. They are known to sequester carbon in much larger amounts than plants and as such the book also describes their phycoremediation potential for conventional as well as emerging contaminants. It describes the role of anaerobic digestion in algal biorefineries, bioreactions and process parameters, biogas recovery and reuse. The role of algal biofilm based technology in wastewater treatment and transforming waste into bio products is discussed and remediation of sewage water through algae is assessed. The book also describes the production of biohydrogen, bio oil, biodiesel and the major bottlenecks in their usage. The emerging characterization techniques of these biofuels (bio oil and biodiesel) are described as are the decolorizing potential of algae and the genetic engineering techniques that could enhance the production of lipids in algae. Other aspects of the book include the role of remote sensing technology in the monitoring of algae and a life cycle assessment of algal biofuels.

**Artificial Intelligence in Chemical Engineering** Farooq Sher, 2025-10-09 Artificial Intelligence in Chemical Engineering explores the integration of artificial intelligence (AI) into various facets of chemical engineering. The

book introduces historical information highlights current state and trends in AI applications and discusses challenges and opportunities within the field. Foundational principles of AI and machine learning are thoroughly covered giving readers a solid understanding of basic AI principles machine learning algorithms and the crucial processes of model training and validation. The book then delves into the critical phase of data acquisition and preprocessing for AI models addressing strategies for data collection ensuring data quality and techniques for feature engineering and selection. Subsequent chapters cover a wide spectrum of AI applications in chemical engineering. From supervised and unsupervised learning for process modeling to the advanced realm of deep learning applications this book explores neural networks convolutional and recurrent architectures and their real world applications in process optimization and analysis. Navigates the dynamic intersection of AI and chemical engineering covering ethical considerations interdisciplinary applications and AI's impact on safety sustainability and innovation. Bridges the gap between policy and implementation of AI in chemical engineering facilitating a harmonious integration of AI technologies and fostering responsible and effective use within the chemical engineering industry. Offers a forward looking approach to guide professionals researchers and students in navigating the dynamic and transformative future of AI in chemical engineering.
