Science and Technology Roadmaps Amanda Wendell,2014 A well integrated national biosurveillance enterprise is a national security imperative The United States ability to detect quickly and characterise a potential incident of national significance that affects human animal or plant health is of paramount importance Rapid detection and enhanced situational awareness are critical to saving lives and improving incident outcomes whether the result of a bioterrorism attack or other weapons of mass destruction WMD threat an emerging infectious disease pandemic environmental disaster or a food borne illness Beyond the need to protect domestic interests and because health threats transcend national borders the United States also plays a vital role within an international network of biosurveillance centres across the globe This book focuses on the national strategy for biosurveillance and the national biosurveillance science and technology roadmap *Defense*

treatments or vaccines can directly affect the security of the world's health since these diseases also know no boundaries and will easily cross borders. Sustaining public and private investment in the development of medical countermeasures (MCMs) before an emerging infectious disease becomes a public health emergency in the United States has been extremely challenging. Interest and momentum peak during a crisis and wane between events, and there is little interest in disease threats outside the United States until they impact people stateside. On March 26 and 27, 2015, the Institute of Medicine convened a workshop in Washington DC to discuss how to achieve rapid and nimble MCM capability for new and emerging threats. Public and private sector stakeholders examined recent efforts to prepare for and respond to outbreaks of Ebola, Virus Disease, pandemic influenza, and coronaviruses from policy, budget, and operational standpoints. Participants discussed the need for rapid access to MCM to ensure national security and considered strategies and business models that could enhance stakeholder interest and investment in sustainable response capabilities. This report summarizes the presentations and discussions from this workshop. Koenig and Schultz's Disaster Medicine Kristi L. Koenig, Carl H. Schultz, 2016-02-16 As societies become more complex and interconnected, the global risk for catastrophic disasters is increasing. Demand for expertise to mitigate the human suffering and damage these events cause is also high. A new field of disaster medicine is emerging, offering innovative approaches to optimize disaster management. Much of the information needed to create the foundation for this growing specialty is not objectively described or is scattered among multiple different sources. This definitive work brings together a coherent and comprehensive collection of scientific observations and evidence-based recommendations with expert contributors from around the globe. This book identifies essential subject matter, clarifies nomenclature, and outlines necessary areas of proficiency for healthcare professionals handling mass casualty crises. It also describes in-depth strategies for the rapid diagnosis and treatment of victims suffering from blast injuries or exposure to chemical, biological, and radiological agents.
