have been inconclusive on ASCVD risk associated treatment practice decisions after the 2013 ACC AHA guideline implementation and comparisons of statin utilization have only been conducted with short term follow up 1-2 years post guideline release Objectives Purpose This study compared differences in achieving LDL C goals in patients with ASCVD before and after the 2013 ACC AHA guideline release Methods The retrospective cohort study used laboratory and claims data from December 2012 through December 2017 for patients 18 to 89 years of age cared for in the Baylor Scott & White Health system in Texas and surrounding states. The study found that patients with ASCVD were more likely to achieve LDL C goals at all time points compared to patients without ASCVD. The percentage of patients achieving LDL C goals at baseline was 55% for patients with ASCVD and 45% for patients without ASCVD. At 6 months, the percentage of patients achieving LDL C goals was 60% for patients with ASCVD and 50% for patients without ASCVD.
