

Statistics for Business: Introductory Probability, Final Review

Procedurally, we will be applying this method to every three-year experiment and comparing the resulting mean and standard deviation from each year (and then comparing the standard deviation of the mean and standard deviation of the mean) to determine if there is a significant difference between the two. If there is, then we will be able to conclude that the data is not random and that the process is not in control.

the same time, the number of patients with a history of stroke and the number of patients with a history of hypertension were significantly higher in the group with a history of stroke than in the group without a history of stroke (Table 1).
