

The City of Ur

Kiefer Saturnino #79 Rm 301 11-11-14

Introduction
The city of Ur was one of the most important cities of ancient Mesopotamia. It was located in the south of the Tigris and Euphrates rivers, in what is now Iraq. The city was founded around 2600 BC and was one of the first cities to have a written language. It was also one of the first cities to have a government and a religion. The city was destroyed by the Babylonians in 539 BC and was never rebuilt. Today, the ruins of the city are still visible and are a popular tourist attraction.

Mesopotamia Projects:

Ancient Mesopotamia Linda Armstrong, 2002-09-01 Color Overheads Included Welcome to ancient Mesopotamia home of the world's first cities This strip of land between the Tigris and Euphrates Rivers is often called the Cradle of Civilization Mesopotamians were among the first to use the wheel and the written word In mathematics they used place value and were comfortable with quadratic equations They had libraries that included everything from recipe books to directions for making glass People still read Gilgamesh their great epic poem The activities in this book provide insight into the history technology laws economy literature and art of ancient Mesopotamia The eight full color transparencies at the back of the book can be used alone or with specific activities listed in the table of contents

Ice Age Extinction Jim Snook, 2008 The author explores the causes of Earth's cyclical temperature changes and shows how those temperature shifts touch off a chain of events in the atmosphere in the oceans and on land Cold temperature was the trigger and the resultant reduction in carbon dioxide he argues was the bullet that killed off so many species The re warming released more carbon dioxide into the atmosphere and fueled a resurgence This book provides significant long term background information to put global warming into perspective In addition the author describes the human responses to increases in atmospheric carbon dioxide after the last ice age and in the last 150 years Near the end of the last ice age atmospheric carbon dioxide was about half of what it is today Due to the lack of carbon dioxide most of the vegetation disappeared from the middle and high latitudes Without plants to eat many large animals became extinct North America lost three fourths of its large animals including the woolly mammoth mastodon and saber tooth cat Humans too had little to eat in these areas and their population declined dramatically The book then explains how and why atmospheric carbon dioxide increased by about 50% after the last ice age ended encouraging a population explosion among plants animals and humans all of which then migrated into many previously barren areas More recently the 28% increase in atmospheric carbon dioxide in the last 150 years has caused a six fold increase in the human population Changes in the next 300 years will reverse some of the current trends This book has value for anyone interested in the ice age extinction glaciers the glacial cycle the atmosphere and oceans and the past and future of plants animals and humans It provides long term information on atmospheric carbon dioxide global warming and cooling

Can Democracy Survive in the 21st Century? Ronald M. Glassman, 2021-07-05 This book analyzes the many threats to democracy that exist in the 21st century and tries to understand how democracy can survive economic social and political crises It focuses on issues of oligarchy tyranny totalitarianism and ochlocracy It discusses how these forms of governance manifested themselves in ancient and medieval worlds and how socio economic transitions in the 21st century have created conditions that increasingly pose similar threats to modern democracy The author discusses broad transitions in the contemporary world economic transition to advanced high technology capitalism cultural transition from traditional religious and family values to norms focusing on racial equality gender and transgender equality and liberation and multiculturalism also transition from

the traditional religious worldview to rational scientific worldview and from religious morality to secular humanist ethics These taken together undergird the political transition from traditional authority involving monarchy and aristocracy to rational legal authority involving constitutional law and democratic participation The book shows through extensive country discussions that whenever these transitions become difficult undemocratic forms of governance may emerge and override democracy Authored by an expert in the field this book touches upon an especially topical theme in the contemporary world and is of interest to a wide readership across the social sciences from researchers and students to discerning laypersons

C. Chiu,2011 *The Amuq Valley Regional Projects* K. Aslihan Yener,University of Chicago. Oriental Institute,2005 The results of the Amuq Valley Regional Projects AVRP presented in this volume are the

outcome of eight seasons of intensive fieldwork 1995-2002 representing the first phase of a long range broadly based archaeological investigation in the Hatay region of southern Turkey. From its inception the research was conceived as a series of coordinated field projects. The detailed and expansive scope of the regional project originated from a number of theoretical and methodological considerations. Encouraged in part by its potential for providing the examination of interactions between technological developments, complex social institutions, natural resources and the environment, the original Oriental Institute project, then called the Syro-Hittite Expedition in the 1930s, was formally reactivated in 1995. The strategy of taking a regional approach with a series of linked field projects established an unusual multi-institutional laboratory to research key themes that it is hoped will provide explanations about regional and interregional relationships. The initial stage of the research strategy focused on contextualising the settlements by survey, followed by site-specific investigations prior to the resumption of new excavations. The regional surveys targeted the Amuq Valley, the plain of Antioch today Antakya, and the delta of the Orontes River. Today, Samandag, Artak and micro-scale studies were the focus of the third scale of investigations.

The Oxford Encyclopedia of Economic History Joel Mokyr, 2003-10-16. What were the economic roots of modern industrialism? Were labor unions ever effective in raising workers' living standards? Did high levels of taxation in the past normally lead to economic decline? These and similar questions profoundly inform a wide range of intertwined social issues whose complexity, scope and depth become fully evident in the Encyclopedia. Due to the interdisciplinary nature of the field, the Encyclopedia is divided not only by chronological and geographic boundaries but also by related subfields such as agricultural history, demographic history, business history and the histories of technology, migration and transportation. The articles, all written and signed by international contributors, include scholars from Europe, Latin America, Africa and Asia. Covering economic history in all areas of the world and segments of economies from prehistoric times to the present, *The Oxford Encyclopedia of Economic History* is the ideal resource for students, economists and general readers, offering a unique glimpse into this integral part of world history.

Peterson's Grants for Graduate & Postdoctoral Study, 1998. *The Early Prehistory of Mesopotamia* Roger Matthews, 2000. The early prehistory of Mesopotamia provides a uniquely rich and significant contribution to the study of the human past. Within the geographic bounds of Mesopotamia, many major developments took place. Early forms of hominid, probably *Homo erectus* and definitely Neanderthal, passed countless millennia here to be succeeded by anatomically modern humans. After the end of the last Ice Age, the pace of human activity increased. Settled communities appeared for the first time, followed by the extensive and intensive exploitation and domestication of plants and animals. By 4500 BC, settled human communities were practising a full spectrum of agricultural techniques, cultivating a range of crops and husbanding domesticated animals for a variety of purposes while maintaining an involvement in traditional hunting strategies. Firmly based on site-by-site examination, this volume contains detailed analyses of all evidence relevant to these and other major concerns of the early Mesopotamian past.
