Jaume Bertranpetit, Juli Peretó

More Than Nature Needs Language Mind And Evolution:

More than Nature Needs Derek Bickerton, 2014-01-13 How did humans acquire cognitive capacities far more powerful than any hunting and gathering primate needed to survive Alfred Russel Wallace co founder with Darwin of evolutionary theory set humans outside normal evolution Darwin thought use of language might have shaped our sophisticated brains but this remained an intriguing guess until now Combining state of the art research with forty years of writing and thinking about language origins Derek Bickerton convincingly resolves a crucial problem that biology and the cognitive sciences have systematically avoided Before language or advanced cognition could be born humans had to escape the prison of the here and now in which animal thinking and communication were both trapped Then the brain's self organization triggered by words assembled mechanisms that could link not only words but the concepts those words symbolized a process that had to be under conscious control Those mechanisms could be used equally for thinking and for talking but the skeletal structures they produced were suboptimal for the hearer and had to be elaborated Starting from humankind's remotest past *More than Nature Needs* transcends nativist thesis and empiricist antithesis by presenting a revolutionary synthesis that shows specifically and in a principled way how and why the synthesis came about [More than Nature Needs](#) Derek Bickerton, 2014-01-13 How did humans acquire cognition more powerful than a hunting gathering primate needed to survive Combining state of the art research with forty years of writing about language evolution Derek Bickerton resolves a crucial problem that both biology and cognitive science have ignored how animal thinking escaped the prison of the here and now

A Critical Introduction to Language Evolution Ljiljana Progovac, 2018-12-18 This book provides a critical introduction to the current views and controversies regarding language evolution It sheds new light on hot topics such as How ancient is language Did Neanderthals have some form of language Did language evolve gradually and incrementally through stages or suddenly in one leap in all its complexity Does language evolution involve natural selection or not This book is essential reading for scholars and students interested in language evolution especially those in the fields of linguistics psychology biology anthropology and neuroscience [The Biology of Language Under a Minimalist Lens: Promises, Achievements, and Limits](#) Antonio Benítez-Burraco, Koji Fujita, Koji Hoshi, Ljiljana Progovac, 2021-03-30 [Illuminating Human Evolution: 150 Years after Darwin](#) Jaume Bertranpetit, Juli Peretó, 2022-10-06 This book presents a series of perspectives showing the current knowledge about human evolution On the occasion of the 150th anniversary of Darwin's book *The Descent of Man and Selection in Relation to Sex* in which he explicitly addresses the natural origin of the human species this collective work reviews current and diverse aspects of human evolution from psychology linguistics genomics paleontology artistic expression or sexual selection It also offers a historical social and ideological context of what is often considered to be Darwin's second great work after *The Origin of Species* Although current research is concentrated largely on fossils and genomes this book also deals with the main points Darwin centered his attention on comparative morphology

and psychology and sexual selection It also covers other new aspects such as the origin of art social structure and social learning With contributions from leading experts in their respective fields the book guides readers to the study of the social context of Darwin and his time and the state of the art of studies on human evolution and sexual selection considering all aspects that Darwin examined including those that emerged later and now are important disciplines in our understanding of our own evolution The English translation of parts of this book from its Spanish original manuscript was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content

The Comparative Psychology of Intelligence: Macphail Revisited Michael Colombo, Damian Scarf, Thomas Zentall, 2021-03-15

Monsters in the Classroom: Noam Chomsky, Human Nature, and Education Philip G. Hill, 2023 In this lucid original and comprehensive work the articulated approaches to pedagogy are based on specific conceptions of human nature Drawing on a vast range of Chomsky's prodigious output in linguistics politics biology cognitive science and education Hill highlights two fundamental elements of Chomsky's understanding of human nature and uses these elements as the foundation of a highly creative approach to pedagogy The originality of the work is apparent in the way the author identifies how key ideas in Chomsky's linguistics and political discourse are rooted in a liberatory approach to education The value of the work lies in its practical nature Even though it makes reference to ideas in various academic disciplines the work's overall value is reflected in the way ideas relate to Hill's personal teaching experiences and how they apply in a concrete classroom setting

Doc-Humanity Maurizio Ferraris, 2022-09-12 However you view the present time it is a new century a new world and also a new humanity in fact humanity is not something that was ever defined once and for all but remains an open project For several decades we have been witnessing a revolution However unlike the political and ideological revolutions that took place around the First World War this is a technological and much more radical one that does not depend on people's beliefs but rather on the tireless labour of machines The rise of automation has brought about a revelation of something that had hitherto remained hidden in the workshops of homo faber That is there are very few functions apart from consumption where a machine cannot replace a human being be these material or spiritual machines need energy but they can also do without it whereas humans die if deprived of it or one can imagine a machine producing symphonies but not enjoying them So while human beings are still needed their roles and scopes have to be reconsidered Workers may be superfluous but humans are still needed including those who until recently only recognised themselves as producers The exclusion of workers from production does not discount humans being able to produce value in the form of consumption Recognising this will enable us to conceive the Webfare a new digital system that will teach us to find new names and new forms more tolerance and room for traditional human needs Above all it will teach us how to transform the time given to us by automation into an opportunity for progress

From Ecology to Brain Development: Bridging

Separate Evolutionary Paradigms Francisco Aboitiz, Miguel L. Concha, Christian González-Billault, Jorge Mpodozis, 2018-09-14 The nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures This special topic is oriented to develop an integrative view from behavior and ecology to neurodevelopmental processes We address questions such as how do sensory systems evolve according to ecological conditions How do neural networks organize to generate adaptive behavior How does cognition and brain connectivity evolve What are the developmental mechanisms that give rise to functional adaptation Accordingly the book is divided in three sections i Evolution of sensorimotor systems ii Cognitive computations and neural circuits and iii Development and brain evolution We hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome results of a compromise between different parameters rather than being the result of several single variables acting independently of each other

The Adapted Mind Jerome H. Barkow, Leda Cosmides, John Tooby, 1992 Although researchers have long been aware that the species typical architecture of the human mind is the product of our evolutionary history it has only been in the last three decades that advances in such fields as evolutionary biology cognitive psychology and paleoanthropology have made the fact of our evolution illuminating Converging findings from a variety of disciplines are leading to the emergence of a fundamentally new view of the human mind and with it a new framework for the behavioral and social sciences First with the advent of the cognitive revolution human nature can finally be defined precisely as the set of universal species typical information processing programs that operate beneath the surface of expressed cultural variability Second this collection of cognitive programs evolved in the Pleistocene to solve the adaptive problems regularly faced by our hunter gatherer ancestors problems such as mate selection language acquisition co operation and sexual infidelity Consequently the traditional view of the mind as a general purpose computer tabula rasa or passive recipient of culture is being replaced by the view that the mind resembles an intricate network of functionally specialized computers each of which imposes contentful structure on human mental organization and culture The Adapted Mind explores this new approach evolutionary psychology and its implications for a new view of culture
