**Twittering the #ArabSpring?** Johannes Sieben, 2012-12-12  
 Master's Thesis from the year 2012 in the subject Communications Multimedia Internet New Technologies grade 72%  
 Distinction City University London School of Informatics and School of Arts and Social Sciences course MSc Information Communication and Society language English abstract This dissertation examines tweet content from key periods of the uprisings in Egypt and Syria of 2011 and 2012 generally known as the Arab Spring. Some authors and the main stream media have suggested that these uprisings were significantly influenced and organised by Twitter and subsequently referred to them as Twitter Revolution. Other authors have strongly opposed this idea and attributed it to self-deception in the light of marvellous inventions of the Western World. They have suggested Twitter was predominantly used as an information sharing network. In an effort to contribute data to this debate this dissertation analyses tweet content from three different observation periods. Two tweet datasets were collected from other academics and third one was crawled from the Twitter API. This process made use of the crawling tool cURL and the database software MongoDB. The combined tweet dataset contained about 1.9 million tweets out of which a sample of 1945 tweets was drawn. This sample was then evaluated in a quantitative content analysis according to a coding manual. These codes were entered into the statistical analysis software SPSS in which they were also processed. This study found that in the context of these uprisings Twitter was indeed used more as an information sharing tool and only to a relatively small fraction for organisational purposes. This result does not negate the possibility of a mobilising effect of that small fraction. A further central result is that almost every second tweet contained a hyperlink and that most of these lead to visual stimuli. *University of Arkansas at Little Rock Law Review*, 2011
