International Regimes in China Gianluca Ferraro,2013-07-24 According to the Food and Agriculture Organization FAO of the United Nations more than 80% of world's fish stocks are fully exploited over exploited depleted or recovering from depletion Although several international agreements have promoted more responsible fisheries coastal states have usually maintained national policies that enable higher harvest levels rather than greater conservation of fish stocks and international agreements for more responsible fisheries have generally experienced a weak domestic implementation Among the major coastal fishing states China constitutes the largest fish producer and main exporter in the world and therefore presents a fascinating case study for the domestic implementation of international fisheries agreements This book investigates the degree to which China has complied with the international agreements it has signed and asks why it is failing to meet expectations Crucially it calls for greater emphasis on the political rather than technical issues involved in the implementation of international regimes In turn it examines how understanding the case of China can help us to develop solutions for improved international compliance in the future Providing an improved understanding of the implementation of international regimes alongside an in depth study of China's political system policy making and compliance this book will be of great interest to students and scholars of Chinese studies international relations public policy and international law and environmental studies It will also be useful for policy makers working in the fields of environmental regulation and fisheries management

## **International Watercourses Law and Multilateral Environmental Agreements** Yang Liu,2024-02-06

This book anchors its arguments in Article 20 of the Watercourses Convention and explores consistencies and inconsistencies in parallel definitions substantive and procedural obligations and institutional arrangements in IWL and the Ramsar and Biodiversity Conventions with respect to the protection and preservation of ecosystems of shared inland waters Dr Yang Liu argues that the all around informed and integrated application of IWL and MEAs is essential for the effective protection and preservation of shared inland water ecosystems However the degree of cross fertilization of parallel provisions should be examined on a case by case basis in light of the legal analytical framework deployed in this study

**International Environmental Law and Policy** Joanna Miller Smallwood,2024-01-24 This book introduces a novel discourse based on socio legal theory of compliance with international environmental law which addresses the overarching question When can international environmental law and policy achieve implementation compliance and be effective Offering an important contribution to academic and practical understandings of implementation and compliance with international environmental obligations the book firstly critiques existing multidisciplinary theories of law and then brings together international and domestic legal theories to highlight their symbiotic relationship It also stresses the importance of interactions between domestic and international legal and policy processes This pioneering discourse is argued to be transformative to international environmental regimes and offers a way for them to be truly normative and to achieve

compliance The book will be of interest to students and scholars in the field of socio legal studies and international environmental law and policy The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

**Global Greens, Global Governance** Jeremy A. Rabkin,James M. Sheehan,1999 This classic publication exposes the efforts of the environmental movement to undermine individual freedom by promoting the growth of authoritarian and unaccountable global institutions Over the course of the past fifteen years environmental organisations have become increasingly obsessed with global environmental issues such as climate change ozone depletion and biodiversity loss They claim that these issues affect everyone on the planet and necessitate global agreements In response to lobbying by these environmental organisations governments around the world have signed up to many international treaties committing their respective countries to limiting emissions of substances such as CFCs and carbon dioxide Like other political agreements the global treaties involved considerable horse trading with governments of developing countries only agreeing to sign up if the governments of developed countries would commit to transferring funds to them Even so developing country governments have resisted subsequent attempts of make them sign up to specific limits on emissions of carbon dioxide and production of CFCs continues apace in China India Russia and other developing countries As pressure grows for the development of binding restrictions on the production and emission of certain chemicals nations are likely gradually to cede sovereignty to

supranational organisations such as the United Nations with policies ever more dominated by the few organisations environmental labour and others who are accredited as Non Governmental Organisations with the UN The evidence strongly suggests that the resultant global governance will be undemocratic and policies will be based on dogma not sound science
