Mediated Modeling Marjan Van den Belt, 2004-04 Mediated modeling is an innovative new approach that enhances the use of computer models as invaluable tools to guide policy and management decisions Rather than having outside experts dispensing answers to local stakeholders mediated modeling brings together diverse interests to raise the shared level of understanding and foster a broad and deep consensus It provides a structured process based on system dynamics thinking in which community members government officials industry representatives and other stakeholders can work together to produce a coherent simple but elegant simulation model Mediated Modeling by Marjan Van Den Belt is a practical guide to participatory modeling for both practitioners and students one that is firmly theoretically grounded in the field of systems dynamics and environmental modeling Five in depth case studies describe the successful use of the technique in a variety of settings and a final chapter synthesizes the lessons highlighted by the case studies Mediated Modeling s step by step description of the techniques and practical advice regarding implementation offer a real world solution for all those seeking to make sound decisions about the environment Handbook of Research methods and Applications in Environmental Studies Matthias Ruth, 2015-08-28 This Handbook presents methods to advance the understanding of interdependencies between the well being of human societies and the performance of their biophysical environment It showcases applications to material and energy use urbanization and tech **Routledge Handbook of Ecological Economics** Clive L.
