Nanotechnology For Chemical And Biological Defense:

Nanotechnology for Chemical and Biological Defense Margaret Kosal, 2009-06-11 New and unpredicted technologies are emerging at an unprecedeted pace around the world. Communication of those new discoveries is occurring faster than ever meaning that the unique ownership of a piece of new technology is no longer a sufficient position if not impossible. In today's world recognition of the potential applications of a technology and a sense of purpose in exploiting it are far more important than simply having access to it. Technological surprise has and will continue to take many forms. A plethora of new technologies are under development for peaceful means but may have unintended security consequences and will certainly require innovative countermeasures. A relevant example is the tremendous development in biotechnology that has occurred since the advent of recombinant DNA and tissue culture based processes in the 1970s. If US government agencies and the defense and academic communities had more clearly recognized the potential for biotechnology to affect fundamental security and warfighting doctrines 20 years ago the situation today could be very different. Defense against chemical and biological weapons from both states and nonstate actors currently presents a threat that is difficult to predict and for which traditional solutions are increasingly less effective. Nanotechnology has emerged as a well funded discipline that like biotechnology carries the potential for groundbreaking applications and the potential for unpredictable harm. The world is likely 20 years away from the full impact of the nanotechnology on defensive capabilities.

Nanotechnology to Aid Chemical and Biological Defense Terri A. Camesano, 2015-10-13 This book presents research into chemical biological radiological and nuclear CBRN defense and environmental security exploring practical implications of the research. Contributions from a diverse group of international civilian researchers present the latest work on nanotechnology problems in this area looking at detection protective technologies decontamination and threats to environmental security due to bacteriophages and nanomaterials. Highlights include the potential of Atomic Force Microscopy AFM to characterize the nanoscale properties of microbial pathogens the development of bacteriophage based therapeutics prophylactic and diagnostic preparations and their uses in different fields such as medicine veterinary agriculture food and water safety amongst others. Readers may also consider an inexpensive bioassay suited for assessing chemical poisoning in the environment such as the presence of pesticides sensors to detect ultra trace quantities of the explosive Pentaerythritol tetranitrate PETN using nanotubes and electrochemical sensors to simultaneously detect and reduce the explosive trinitrotoluene TNT to 2,4,6 triaminotoluene TAT in solution. This book shows how cooperative research among NATO countries and NATO partners can make a critical contribution to meeting the opportunities and challenges of nanotechnology problems relevant to chemical and biological defense needs. The papers presented here are representative of contributions made to the Advanced Research Workshop ARW on September 22-26, 2014 in Antalya Turkey to address the NATO SPS Key Priority of Defense against CBRN Agents and Environmental Security.
