### **Developing Charging Infrastructure and Technologies for Electric Vehicles**

Alam, Mohammad Saad, Pillai, Reji Kumar, Murugesan, N., 2021-12-31 The increase in air pollution and vehicular emissions has led to the development of the renewable energy based generation and electrification of transportation Further the electrification shift faces an enormous challenge due to limited driving range long charging time and high initial cost of deployment Firstly there has been a discussion on renewable energy such as how wind power and solar power can be generated by wind turbines and photovoltaics respectively while these are intermittent in nature The combination of these renewable energy resources with available power generation system will make electric vehicle EV charging sustainable and viable after the payback period Recently there has also been a significant discussion focused on various EV charging types and the level of power for charging to minimize the charging time By focusing on both sustainable and renewable energy as well as charging infrastructures and technologies the future for EV can be explored Developing Charging Infrastructure and Technologies for Electric Vehicles reviews and discusses the state of the art in electric vehicle charging technologies their applications economic environmental and social impact and integration with renewable energy This book captures the state of the art in electric vehicle charging infrastructure deployment their applications architectures and relevant technologies In addition this book identifies potential research directions and technologies that facilitate insights on EV charging in various charging places such as smart home charging parking EV charging and charging stations This book will be essential for power system architects mechanics electrical engineers practitioners developers practitioners researchers academicians and students interested in the problems and solutions to the state of the art status of electric vehicles

**Coordinating Electric Vehicle Charging Station Installation Between the Government and Automakers** Jiayi Joey Yu, 2020 In cognizant of the fact that accessibility of Electric Vehicle EV charging stations is an important determining factor for EV adoption many governments are contemplating with the ideas of constructing extra EV charging stations directly or offering subsidy to entice automakers to construct more EV charging stations so that a certain EV adoption target is achieved To do so governments need to coordinate with automakers to ensure the total number of charging stations is planned optimally In this paper we examine this coordination problem by considering the case when the government can either build extra EV charging stations directly or offer per station subsidy to entice automakers to build them Also to achieve a certain EV adoption target the government can also offer per unit purchase subsidy to consumers By consider the interactions among

the government automakers and consumers our equilibrium analysis yields the following results First we find that either the government or the automakers but not both should build extra EV charging stations in order to achieve a certain EV adoption target Second the entity the government or the automaker that is responsible for constructing charging stations depends on the adoption target and the construction cost of EV stations Third when the construction cost is high it can be more cost effective for the government to offer per unit purchase subsidy than to construct extra new charging stations directly or indirectly via per station subsidy These results can be served as guidelines for the government when contemplating with the idea of constructing extra EV charging stations directly or providing incentives for automakers to build extra EV stations
