Richard, Timothy M. Devinney, George S. Yip, Gerry Johnson, 2015 Organizational performance is one of the most important constructs in management research We review the contexts that frame organizational performance as a dependent variable with specific emphasis on how it is operationalized and measured The research contexts of past studies are firmly anchored around a multidimensional conceptualization of organizational performance related predominately to stakeholders heterogeneous market circumstances and time The review of the operationalization and measurement of performance highlights the limited effectiveness of commonly accepted measurement practices in tapping this multidimensionality By synthesizing the literature the foundations are laid for the improved measurement of performance in management research We conclude with a call for research that examines the effectiveness of triangulation utilizing multiple measures applies longitudinal data and brings to bear alternative methodological formulations as means of appropriately aligning research contexts with the measurement of organizational performance Validating these measurement

approaches is an important agenda for further research

Transforming Performance Measurement Dean R. Spitzer, You can t accurately gauge your company s performance if you don t know what or how to measure It s no secret that you can t improve your organization s performance without measuring it In fact every function unit process and the organization as a whole is built and run according to the parameters and expectations of its measurement system So you d better make sure you re doing it right All too often performance measurement creates dysfunction whether among individuals teams or across entire divisions and companies Most traditional measurement systems actually encourage unhealthy competition for personal gain creating internal conflict and breeding distrust of performance measurement *Transforming Performance Measurement* presents a breakthrough approach that will not only significantly reduce those dysfunctions but also promote alignment with business strategy maximize cross enterprise integration and help everyone to work collaboratively to drive value throughout your organization Performance improvement thought leader Dean Spitzer explains why performance measurement should be less about calculations and analysis and more about the crucial social factors that determine how well the measurements get used His socialization of measurement process focuses on learning and improvement from measurement and on the importance of asking such questions as How well do our measures reflect our business model How successfully are they driving our strategy What should we be measuring and not measuring Are the right people having the right measurement discussions Performance measurement is a dynamic process that calls for an awareness of the balance necessary between seemingly disparate ideas the technical and the social aspects of performance measurement For example you need technology to manage the flood of data but you must make sure that it supports the people who will be making decisions and taking action crucial to your organization s success This book shows you how to design that technical social balance into your measurement system While it is urgent to start taking action now transforming your organization s performance measurement system will take time *Transforming Performance Measurement* gives you assessment tools to gauge where you are now and a roadmap for moving with little or no disruption to a more transformational and mature measurement system The book also provides 34 TMAPs

 If organizations cannot appraise their performance they cannot manage their businesses The traditional approach to

organizational performance has been to consider profitability which is normally regarded as return on investment. However, the study has provided a thorough view of organizational performance. Therefore, performance measurement literature has been reviewed, which has focused on various approaches such as the performance prism, the balanced scorecard (BSC), the performance pyramid, and the triple bottom line. The study has discussed the multi-dimensionality of organizational performance and suggests that organizations need to incorporate both dimensions of organization's performance: subjective and objective. The main purpose of the study was to provide a holistic view of various approaches with respect to organizational performance.
