From the passage, infer the position of the English Parliament in the Act of Supremacy, 1534.

full power and authority from time to time to visit, repress, redress, record, order, correct, restrain, and amend all such errors, heresies, abuses, offenses, contempts, and enormities, whatsoever they be, which by any manner of spiritual authority or jurisdiction ought or may lawfully be reformed, repressed, ordered, redressed, corrected, restrained, or amended, most to the pleasure of Almighty God, the increase of virtue in Christ's religion, and for the conservation of the peace, unity, and tranquility of this realm; any usage, foreign law, foreign authority, prescription, or any other thing or things to the contrary hereof notwithstanding

English Parliament, Act of Supremacy, 1534

From the passage, one may infer that the English Parliament wished to argue that the Act of Supremacy would:

- (A) give the English king a new position of authority
- (B) give the position of head of the Church of England to Henry VIII alone and exclude his heirs
- (C) establish Calvinism as the one true theology in England
- (D) end various forms of corruption plaguing the Church in England

{
  "answer": "A",
  "reasoning": "The Act of Supremacy aimed to give the English king a new position of authority as the supreme head of the Church of England, in addition to his existing role as the monarch. This is evident from the language used in the passage, which emphasizes the king's authority and power over the Church of England."

### **Rule of the Robots**

Martin Ford,2021-09-30 In this sequel to his prescient New York Times bestseller Rise of the Robots Martin Ford presents us with a striking vision of the very near future He argues that AI is a uniquely powerful technology a kind of electricity of intelligence that is altering every dimension of human life often for the better with advanced science being done by machines who can solve problems humans can not AI has the potential to help us fight climate change or the next pandemic but it also has a capacity for profound harm Deep fakes AI generated audio or video of events that never happened are poised to cause havoc throughout society AI empowers authoritarian regimes like China with unprecedented mechanisms for social control And AI can be deeply biased learning bigoted attitudes from the data used to train algorithms and perpetuating them Hard hitting and thought provoking covering everything from self driving cars to the history of deep learning to apps for diagnosing skin cancer Rule of the Robots challenges our fears and preconceptions about artificial intelligence Ford argues that AI is here to stay and the real question is not how to stop it but how to control its negative potential and harness its power for good as AI transforms our economy our politics and our lives

Reading Comprehension and "best Practices" Dawn K. Webster, 2011 Neural Reading Comprehension and Beyond Danqi Chen, 2018 Teaching machines to understand human language documents is one of the most elusive and long standing challenges in Artificial Intelligence This thesis tackles the problem of reading comprehension how to build computer systems to read a passage of text and answer comprehension questions On the one hand we think that reading comprehension is an important task for evaluating how well computer systems understand human language On the other hand if we can build high performing reading comprehension systems they would be a crucial technology for applications such as question answering and dialogue systems In this thesis we focus on neural reading comprehension a class of reading comprehension models built on top of deep neural networks Compared to traditional sparse hand designed feature based models these end to end neural models have proven to be more effective in learning rich linguistic phenomena and improved performance on all the modern reading comprehension benchmarks by a large margin This thesis consists of two parts In the first part we aim to cover the essence of neural reading comprehension and present our efforts at building effective neural reading comprehension models and more importantly understanding what neural reading comprehension models have actually learned and what depth of

language understanding is needed to solve current tasks We also summarize recent advances and discuss future directions and open questions in this field In the second part of this thesis we investigate how we can build practical applications based on the recent success of neural reading comprehension In particular we pioneered two new research directions 1 how we can combine information retrieval techniques with neural reading comprehension to tackle large scale open domain question answering and 2 how we can build conversational question answering systems from current single turn span based reading comprehension models We implemented these ideas in the DrQA and CoQA projects and we demonstrate the effectiveness of these approaches We believe that they hold great promise for future language technologies
