Globalizing Domain-Specific Languages Benoit Combemale,Betty H.C. Cheng,Robert B. France,Jean-Marc Jézéquel,Bernhard Rumpe,2015-10-31 The development of modern complex software intensive systems often involves the use

of multiple DSMLs that capture different system aspects Supporting coordinated use of DSMLs leads to what we call the globalization of modeling languages that is the use of multiple modeling languages to support coordinated development of diverse aspects of a system In this book a number of articles describe the vision and the way globalized DSMLs currently assist integrated DSML support teams working on systems that span many domains and concerns to determine how their work on a particular aspect influences work on other aspects Globalized DSMLs offer support for communicating relevant information and for coordinating development activities and associated technologies within and across teams in addition to providing support for imposing control over development artifacts produced by multiple teams DSMLs can be used to support socio technical coordination by providing the means for stakeholders to bridge the gap between how they perceive a problem and its solution and the programming technologies used to implement a solution They also support coordination of work across multiple teams DSMLs developed in an independent manner to meet the specific needs of domain experts have an associated framework that regulates interactions needed to support collaboration and work coordination across different system domains The articles in the book describe how multiple heterogeneous modeling languages or DSMLs can be related to determine how different aspects of a system influence each other The book includes a research roadmap that broadens the current DSML research focus beyond the development of independent DSMLs to one that provides support for globalized DSMLs

Reasoning in Event-Based Distributed Systems Sven Helmer,Alexandra Poulovassilis,Fatos Xhafa,2011-03-29
With the rapid expansion of the Internet over the last 20 years event based distributed systems are playing an increasingly important role in a broad range of application domains including enterprise management environmental monitoring information dissemination finance pervasive systems autonomic computing collaborative working and learning and geo spatial systems Many different architectures languages and technologies are being used for implementing event based distributed systems and much of the development has been undertaken independently by different communities However a common factor is an ever increasing complexity Users and developers expect that such systems are able not only to handle large volumes of simple events but also to detect complex patterns of events that may be spatially distributed and may span significant periods of time Intelligent and logic based approaches provide sound foundations for addressing many of the research challenges faced and this book covers a broad range of recent advances contributed by leading experts in the field It presents a comprehensive view of reasoning in event based distributed systems bringing together reviews of the state of the art new research contributions and an extensive set of references It will serve as a valuable resource for students faculty and researchers as well as industry practitioners responsible for new systems development
