objective of this Research Topic is to determine the conditions that place students at risk of school failure identifying student
and context variables In spite of the fact that there is currently little doubt about how one learns and how to teach in some
countries of the developed world there is still there is a high rate of school failure Although the term school failure is a very
complex construct insofar as its causes consequences and development from the field of educational psychology the
construct student engagement has recently gained special interest in an attempt to deal with the serious problem of school
failure School engagement builds on the anatomy of the students involvement in school and describes their feelings
behaviors and thoughts about their school experiences So engagement is an important component of students school
experience with a close relationship to achievement and school failure Children who self set academic goals attend school
regularly and on time behave well in class complete their homework and study at home are likely to interact adequately with
the school social and physical environments and perform well in school In contrast children who miss school are more likely
to display disruptive behaviors in class miss homework frequently exhibit violent behaviors on the playground fail subjects be
retained and if the behaviors persist quit school Moreover engagement should also be considered as an important school
outcome eliciting more or less supportive reactions from educators For example children who display school engaged
behaviors are likely to receive motivational and instructional support from their teachers The opposite may also be true But
what makes student engage more or less The relevant literature indicates that personal variables e g sensory motor
neurodevelopmental cognitive motivational emotional behavior problems learning difficulties addictions social and or cultural
variables e g negative family conditions child abuse cultural deprivation ethnic conditions immigration or school variables e g
coexistence at school bullying cyberbullying may concurrently hinder engagement preventing the student from acquiring the
