Palladium in Heterocyclic Chemistry Jie Jack Li, Gordon Gribble, 2006-10-30 Palladium chemistry despite its immaturity has rapidly become an indispensable tool for synthetic organic chemists Heterocycles are of paramount importance in the pharmaceutical industry and palladium chemistry is one of the most novel and efficient ways of making heterocycles Today palladium catalyzed coupling is the method of choice for the synthesis of a wide range of biaryls and heterobiaryls The number of applications of palladium chemistry to the syntheses of heterocycles has grown exponentially These developments highlight the need for a monograph dedicated solely to the palladium chemistry in heterocycles and this book provides a comprehensive explanation of the subject The principal aim of Palladium in Heterocyclic Chemistry is to highlight important palladium mediated reactions of heterocycles with emphasis on

the unique characteristics of individual heterocycles 1 Palladium chemistry of heterocycles has its idiosyncrasies stemming from their different structural properties from the corresponding carbocyclic aryl compounds Even activated chloroheterocycles are sufficiently reactive to undergo Pd catalyzed reactions As a consequence of neither is coordination chemistry involving palladium and heterocycles Many heterocycle containing natural products highlighted throughout the text have elicited great interest from both academic and industrial research groups Recognizing the similarities between the palladium chemistry of arenes and heteroarenes a critical survey of the accomplishments in heterocyclic chemistry keeps readers abreast of this fast growing field It is also hoped that this book will stimulate more interest and inspire new ideas in this exciting field Contains the most up to date developments in this fast moving field Includes 3 new chapters Contains material from selected well respected authors on heterocyclic chemistry **SCIENCE** Patrick K.
