Roadmapping Extended Reality Mariano Alcañiz, Marco Sacco, Jolanda G. Tromp, 2022-08-23 ROADMAPPING

EXTENDED REALITY This book offers a comprehensive overview of the technological aspects of Extended Realities XR and discusses the main challenges and future directions in the field. This book is important and timely. XR technologies have overcome the 3 main aspects that were holding it back from mainstream adoption: cost, cables and size. However, there are many aspects of XR technologies that are now going to be explored and developed that still need urgent research in terms of security, privacy, health and safety, long term effects, addiction risks and age related developmental concerns. The aim of the book is to inform all readers of these open issues and challenges. There are currently a great number of interdisciplinary researchers and developers working in the XR R&D field. Recently, XR technologies moved from the Gartner Hype Cycle onto the Plateau of Productivity on the Gartner Hype Cycle, signaling that the fundamental XR technologies are now deemed mature technologies and ready for deployment in a wide variety of application areas. Corroborated by the fact that XR technologies are part of the future Metaverse, a concept that went rapidly mainstream during the time of writing of this book. Roadmapping Extended Reality is divided into two parts: 1. fundamentals and 2. applications. The first part covers the main technological aspects of XR. The chapters in this section review and discuss relevant fundamental concepts of XR, the actual state of the art and future challenges. The second part of the book focuses on covering a wide range of applications of XR, including a future roadmap. All in all, the book offers a snapshot of the state of the art in XR and addresses the needs of a multidisciplinary audience working in both academia and the industry, as well as stakeholders at government agencies and non-profit organizations.

Audience: This book is aimed at academic and industrial developers exploring and developing applications in the XR, VR, AR, AI, smart IoT, 4th Industrial Revolution space, including those that are solving technology requirements, human factors evaluation, methodology, advances and ROI investigations.

Regulating the Metaverse Ignas Kalpokas, Julija Kalpokienė, 2023-01-26

The metaverse seems to be on everybody's lips and yet very few people can actually explain what it means or why it is important. This book aims to fill the gap from an interdisciplinary perspective informed by law and media and communications studies. Going beyond the optimism emanating from technology companies and venture capitalists, the authors critically evaluate the antecedents and the building blocks of the metaverse, the design and regulatory challenges that need to be solved, and commercial opportunities that are yet to be fully realised. While the metaverse is poised to open new possibilities and perspectives, it will also be a dangerous place, one ripe with threats ranging from disinformation to intellectual property theft to sexual harassment. Hence, the book offers a useful guide to the legal and political governance issues ahead while also contextualising them within the broader domain of governance and regulation of digital technologies.
