8th Grade Practice Test

Use this graph for questions 39-43.

A pendulum is a weight hanging from a fixed point so that it can swing freely back and forth due to the force of gravity pulling it down. When you pull a pendulum back and release it, gravity pulls it back down, but because it's swinging, it doesn't just stop in the middle; it keeps moving to the other side until gravity slows it down and pulls it back again. This back-and-forth-motion is what we call oscillation.
