H. Maze, Neal Hawkins, Christian Sax, 2008 In urban communities there are often limited amounts of right of way available for establishing a large setback distance from the curb for fixed objects Urban communities must constantly weigh the cost of purchasing additional right of way for clear zones against the risk of fixed object crashes From 2004 to 2006 this type of crash on curbed roads represented 15% of all fatal crashes and 3% of all crashes in the state of Iowa Many states have kept the current minimum AASHTO recommendations as their minimum clear zone standards however other states have decided that these recommendations are insufficient and have increased the required minimum clear zone distance to better suit the judgment of local designers This report presents research on the effects of the clear zone on urban curbed streets The research was conducted in two phases The first phase involved a synthesis of practice that included a literature review and a survey of practices in jurisdictions that have developmental and historical patterns similar to those of Iowa The second phase involved investigating the benefits of a 10 ft clear zone which included examining urban corridors in Iowa that meet or do not meet the 10 ft clear zone goal The results of this study indicate that a consistent fixed object offset results in a reduction in the number of fixed object crashes a 5 ft clear zone is most effective when the goal is to minimize the number of fixed object crashes and a 3 ft clear zone is most effective when the goal is to minimize the cost of fixed object crashes **Public Roads**, 2011 **Strategies to Optimize Real Property Acquisition, Relocation Assistance, and Property Management Practices** César Augusto Quiroga, 2014 Chapter 1 Background chapter 2 Survey follow up interviews and literature review chapter 3 Integrated transportation project development and delivery process modeling chapter 4 Reference real property acquisition and relocation assistance work schedule chapter 5 Issues challenges and strategies for improvement or optimization chapter 6 Conclusions and suggestions References Additional resources List of abbreviations appendix A Survey instrument appendix B Survey results appendix C Integrated transportation project development and delivery process phases and activities **The Effects of Bicycle Accommodations on Bicycle/motor Vehicle Safety and Traffic Operations** W.
