**Mechanisms in Homogeneous and Heterogeneous Epoxidation Catalysis** S. Ted Oyama, 2011-10-13 The catalytic epoxidation of olefins plays an important role in the industrial production of several commodity compounds as well as in the synthesis of many intermediates fine chemicals and pharmaceuticals The scale of production ranges from millions of tons per year to a few grams per year The diversity of catalysts is large and encompasses all the known categories of catalyst type homogeneous heterogeneous and biological This book summarizes the current status in these fields concentrating on rates kinetics and reaction mechanisms but also covers broad topics including modeling computational simulation process concepts spectroscopy and new catalyst development The similarities and distinctions between the different reaction systems are compared and the latest advances are described Comprehensive listing of epoxide products Broad comparison of turnover frequencies of homogeneous heterogeneous main group biomimetic and biological catalysts Analysis of the general strengths and weaknesses of varied catalytic systems Detailed description of the mechanisms of reaction for classical and emerging catalysts

Thermodynamics of Solutions Eli Ruckenstein, Ivan L. Shulgin, 2009-06-17 This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade Even though they involve different topics and different systems they have something in common which can be considered as the signature of the present book First these papers are concerned with difficult or very nonideal systems i e systems with very strong interactions e g hydrogen bonding between components or systems with large differences in the partial molar volumes of the components e g the aqueous solutions of proteins or systems that are far from normal conditions e g critical or near critical mixtures Second the conventional thermodynamic methods are not sufficient for the accurate treatment of these mixtures Last but not least these systems are of interest for the pharmaceutical biomedical and related industries In order to meet the thermodynamic challenges involved in these complex mixtures we employed a variety of traditional methods but also new methods such as the fluctuation theory of Kirkwood and Buff and ab initio quantum

mechanical techniques The Kirkwood Buff KB theory is a rigorous formalism which is free of any of the proximations usually used in the thermodynamic treatment of multicomponent systems This theory appears to be very fruitful when applied to the above mentioned difficult systems     The English Catalogue of Books [annual] ,1891 Vols 1898 include a directory of publishers     *Books in Series* ,1985 Vols for 1980 issued in three parts Series Authors and Titles     *Comprehensive Coordination Chemistry* Geoffrey Wilkinson,Robert D.
