[Pathogen Transmission at the Domestic-Wildlife Interface: A Growing Challenge that Requires Integrated Solutions](#) Saúl Jiménez-Ruiz, Nuno Santos, Ferran Jori, Jose Angel Barasona, Amanda Elizabeth Fine, 2024-05-28  
Over thousands of years, wildlife has coexisted with domestic animals in dynamic systems. The domestic-wildlife interfaces are those physical spaces where wild and domestic species overlap and potentially interact through direct and indirect contact with the inherent risk of pathogen transmission. The nature of this interface is complex and can significantly vary over time and across landscapes throughout the world. Over the last centuries, processes such as human intervention on agriculture and animal husbandry, industrialization or globalization have altered ecosystems. These changes often lead to more interconnected interfaces and increased opportunities for the emergence and spread of pathogens because the human population is increasing and expanding. Livestock production is therefore increasing to supply the growing food demand and wildlife often under the pressure of habitat reduction is becoming more exposed to these new interfaces.
