#### Krusty Krabs Breath Mints

Mr. Krabs created a secret ingredient for a breath mint that he thinks will "cure" the bad breath people get from eating crabby patties at the Krusty Krab. He asked 100 customers with a history of bad breath to try his new breath mint. He had 50 customers (Group A) eat a breath mint after they finished eating a crabby patty. The other 50 customers (Group B) also received a breath mint after they finished the sandwich, however, it was just a regular breath mint and did not have the secret ingredient. Both groups were told that they were getting the breath mint that would cure their bad breath. Two hours after eating the crabby patties, 30 customers in Group A and 10 customers in Group B reported having better breath than they normally had after eating crabby patties.

1. Which group of people were in the control group? Group without the secret ingredient, group B
2. What is the independent variable? The secret ingredient
3. What is the dependent variable? Fresh breath
4. What do you think Mr. Krabs' conclusion should be? The secret ingredient helps people to have fresh breath
5. Give examples/details that support why you think in #4 what Mr. Krabs' conclusion should be. 30 out 50 people from group A had fresh breath but only 10 out 50 people from group B did

Science Education during Early Childhood Wolff-Michael Roth, Maria Ines Mafra Goulart, Katerina Plakitsi, 2012-10-12 Children's learning and understanding of science during their pre school years has been a neglected topic in the education literature something this volume aims to redress Paradigmatic notions of science education with their focus on biologically governed development and age specific accession to scientific concepts have perpetuated this state of affairs This book offers a very different perspective however It has its roots in the work of cultural historical activity theorists who since Vygotsky have assumed that any higher cognitive function existed in and as a social relation first Accepting this precept removes any lower limit we may deem appropriate on children's cognitive engagement with science related concepts The authors describe and analyze the ways in which children aged from one to five grapple with scientific concepts and also suggest ways in which pre service and in service teachers can be prepared to teach in ways that support children's development in cultural and historical contexts In doing so the book affirms the value of cultural historical activity theory as an appropriate framework for analyzing preschool children's participation in science learning experiences and shows that that the theory provides an appropriate framework for understanding learning as well as for planning and conducting training for pre school teachers

**Climate Change on Mountains** Olivier Dangles, 2023-10-28 The world is warming up rapidly and this change is most noticeable in mountains with already observable consequences on flora and fauna This book presents concepts methodologies and major achievements of recent research in climate change ecology in mountains by placing this research in a historical perspective that of travelers and naturalists of the Romantic era and first of all Alexander von Humboldt There is now a renewed interest both in academia and beyond in Humboldt's

writings and his view of nature But how can we actually make use of his writings How can we put his philosophy into practice How can we still learn from past scientific figures and do a better science today In this book the author presents how it is possible to succeed in modern science by returning to sources by renewing the tradition of past polymaths such as Humboldt and by having a fully humanistic approach in science He illustrates his point based on his 15 year experience in the study of the ecological effects of climate change in the tropical Andes showing how he has incorporated approaches from other disciplines from different branches of science from history and the arts to achieve a more comprehensive view of his scientific field Alongside hard data discoveries by past naturalists build our understanding of the world but appealing to our emotions makes us want to understand it In the author's view this is a productive and enjoyable way of doing science that speaks to our humanity and also increases our knowledge about nature This academic cross over book appeals to a broad audience of students scientists or supported by attractive illustrations to anyone interested in the adventure or making of science but not necessarily with a scientific background
