**Abstract:** Only humans seem to have the ability to project themselves into their past or future. This mental phenomenon, called autonoetic consciousness, proves the interrelation of memory, imagination, emotion, intelligence and consciousness as a way of creating self-images. The current paper constitutes an integrative study on memory from a theoretical perspective. The first part presents the most known neuroscientific viewpoints on the memory process, along with the pathological case of patient H.M. who lost his memory following the removal of his hippocampus. The second part provides a humanistic perspective on recollection to demonstrate its compatibility with the neurological processes of storing information and forming memories. The final part conveys the phenomenon of recollection from the perspective of identity crisis in Kazuo Ishiguro's novels, as a case study in memory literature. According to memory theories to date, identity cannot exist outside the process of recording and recalling past experiences. Despite the fallible nature of recollection, human beings return to their past in order to give a healthy meaning to their present.

### INTRODUCTION

Due to an enduring emphasis on divisibility, the core conditions of epistemology have long been subject to very diverse areas of investigation, preventing specialists from understanding the human phenomenon as a whole. Consequently, the recurrent discrepancy between procedures and subjects has produced serious gaps, errors and distortions in the study of human history. Specialisation may be indispensable to human progress, but can by no means be sufficient; therefore, academics and researchers who frequently use other fields of knowledge to understand their own areas of specialisation should be overtly encouraged and supported (Lovejoy, 1940).

Nowadays, more than ever before, specialists openly support the integration and alliance of all manifestations of the human mind. The study of human knowledge may be divided for pragmatic reasons, but human existence will always remain a unitary phenomenon, hence the need for integrative research. Seeking to comprehend a single memory concept will most often encompass other fields of human research. Thus, accepting the beneficial

liberalisation of academic and scientific boundaries could lead to a holistic-interdisciplinary understanding of the processes of memory and recollection.

The present study therefore constitutes an integrative analysis of memory, from scientific and humanistic perspectives, with a case study from literature, namely the introspective novels of the Anglo-Japanese Nobel-Prize winner Kazuo Ishiguro.

### A NEUROSCIENTIFIC OVERVIEW

Memory represents the ability to remember the knowledge acquired through experiencing things in life on a daily basis. It is generally known that the potential for storing information has no limits yet empirical evidence proves that the retrieving process naturally lacks perfection even in the healthiest of the brains. The anatomical house of the human mind has both specific and synergistic parts for the six major mental capacities – memory, sight, linguistic and motor skills, mood and personality (Abbott, 2016).

This volume is far more than a festschrift; it is a reflection of Neisser's profound impact on theory and methodology in many subdisciplines of psychology. This book will be of value to all cognitive, developmental, and ecological psychologists.

**Scientific Approaches to Consciousness** Jonathan D. Cohen, Jonathan W. Schooler, 2014-04-04

There are many ways to approach the understanding of consciousness. Questions about these ways have occupied philosophers and metaphysicians for centuries. During the early growth of cognitive science, the problem of consciousness remained taboo, but an increasing number of studies have either implicitly or explicitly begun to bear on its nature. These have been inspired by a number of different original questions and focus on a variety of different empirical phenomena. Thus, studies of implicit memory, subliminal processing, strategic versus automatic processing, allocation of attention, and differences between information processes in the awake versus dreaming state all share a common assumption of a particular quality or state of awareness: alertness, namely consciousness, that somehow can be distinguished from another type of state or states in which the subject is not aware of the information being processed. What distinguishes the cognitive psychological and cognitive neuroscience approach to the question of consciousness from that of philosophy and metaphysics is scientific methodology: a set of tools that permit the empirical study of a phenomenon in an objective and reproducible way. Recent developments in both the empirical and theoretical methodologies of these fields have made it possible to begin to study the phenomenon associated with, if not directly underlying, consciousness in a scientific fashion. This volume tries to resolve the difficulties associated with the scientific investigation of consciousness. The intent is to explore the extent to which consciousness can be the target of direct scientific inquiry, to get on the table some of the relevant work, and consider the degree to which this research can help inform our understanding of consciousness. It brings together a group of cognitive and neuroscientists to share relevant recent research in the fields of cognitive science and neuroscience and to determine whether any new strategies for the scientific pursuit of this question can be developed. A long-term goal is the development of a unified understanding of consciousness, scientific as well as philosophical perspectives. This volume takes the first step toward building the necessary local bridges.

**Minds on Stage** Felix Budelmann, Ineke Sluiter, 2023-04-26

Greek tragedy parades, tests, stimulates, and upends human cognition. Characters plot, deceive, try to fathom elusive gods, and fail to recognise loved ones. Spectators observe the characters' cognitive limitations and contemplate their own grapple with moral quandaries and emotional breakdown, overlay mythical past and topical present, and all the while imagine that a man with a mask is Helen of

Troy With broad coverage of both plays and cognitive capabilities *Minds on Stage* pursues a dual aim to expand our understanding of Greek tragedy and to use Greek tragedy as a focal point for exploring cognitive thinking about literature After an introduction that considers questions of methodology the volume is divided into three parts Part One examines the dynamics of mind reading by characters and audience with articles on Aeschylus Sophocles and Euripides The chapters in Part Two study aspects of the characters cognitive sense making from individual styles of attributing causes and different manners of remembering to the use of objects as tools for thinking Finally Part Three turns to the cognitive dimension of spectating The articles treat the spectators generic expectations and different modes of engagement with the fictional worlds of the plays the joint nature of their attention to the drama the nexus between aesthetic illusion and the ethics of deception as well as the situated nature of cognition that helps both audiences and characters make sense of morally complex situations
