

A robotic hand with multiple articulated fingers is shown interacting with a futuristic, semi-transparent interface. This interface displays various stock market charts, including candlestick graphs and line graphs, all set against a dark, teal-colored background. The charts show price movements over time, with colors representing different data series or trends. The robotic hand appears to be pointing or selecting data points on the screen, suggesting a high-tech, automated trading or analysis process.

AI Use in Social Sciences Demircioğlu, Aytekin, 2025-06-18 Artificial intelligence AI based technologies are significantly impacting various social science disciplines. With the large data sets that are analyzed technologies such as machine learning ML, natural language processing NLP and neural networks are particularly useful in disciplines such as sociology, psychology, political science, anthropology and economics. Thus social science education and research benefit by the ability of AI to effectively analyze data sets, predict and increase interactivity. However, ethical concerns regarding privacy and algorithm bias cause some to be resistant to adopting the use of AI in social science fields. Thus, it is crucial to consider the ethical consequences while exploring the multifaceted impact of AI on education, research and social sciences. *AI Use in Social Sciences* explores the opportunities and challenges AI provides to the field of social sciences. It presents practical applications of AI and the societal implications they have. Covering topics such as philosophy, teaching, economic policy and unified theory of acceptance and use of technology UTAUT, this book is an excellent resource for social scientists, teachers, ethicists, policymakers, researchers, professionals, scholars, academicians and more.
