**Efficiency and Innovation in Logistics** Uwe Clausen, Michael ten Hompel, J. Fabian Meier, 2013-08-16 The importance of logistics in all its variations is still increasing. New technologies emerge, new planning methods and algorithms are developed only to face a market with a growing complexity and the need of weighting monetary costs against ecological impact. Mastering these challenges requires a scientific viewpoint on logistics but always with applications in mind. This volume presents up to date logistics research in all its diversity and interconnectedness. It grew out of the International Logistics Science Conference ILSC held in Dortmund in September 2013 bringing together leading scientists and young academics from nine different countries. The conference was jointly organized by the Efficiency Cluster Logistics and the Fraunhofer Institute for Material Flow and Logistics. The Program Committee used a double blind review process to choose the 12 strongest contributions which were then grouped in four areas: Sustainability logistics including electric mobility, smart information communication technologies and corporate social responsibility management; Intralogistics including the detection of autonomous vehicles, 3D computer vision and sensor functions for forklift trucks; Transport logistics including distribution centre organization, delivery performance in railway systems and logistics reference modelling; Logistics facilities including environmental impact of container ports, parcel sorting systems and model based systems engineering.

**Integration of Electric Vehicles in Open Electricity Markets** Qiuwei Wu, 2013-05-23 Presenting the policy drivers, benefits and challenges for grid integration of electric vehicles (EVs) in the open electricity market environment, this book provides a comprehensive overview of existing electricity markets and demonstrates how EVs are integrated into these different markets and power systems. Unlike other texts, this book analyses EV integration in parallel with electricity market design, showing the interaction between EVs and differing electricity markets. Future regulating power market and distribution system operator (DSO) market design is covered with up to date case studies and examples to help readers carry out similar projects across the world. With in depth analysis, this book describes the impact of EV charging and discharging on transmission and distribution networks, market driven EV congestion management techniques (for example the day ahead tariff based congestion management scenario within electric distribution networks), optimal EV charging management with the fleet operator concept and smart charging management, EV battery technology modelling and tests the use of EVs for balancing power fluctuations from renewable energy sources, looking at power system operation support including frequency reserve power regulation and voltage support. An accessible technical book for power engineers and grid distributed systems operators, this also serves as a reference text for researchers in the area of EVs and power systems. It provides distribution companies with the knowledge they need when facing the challenges introduced by large scale EV deployment and demonstrates how transmission system operators (TSOs) can develop the existing system service market in order to fully utilize the potential of EV flexibility. With thorough coverage of the technologies for EV integration, this volume is informative.
