Big Memory Systems Yu Hua, 2026-01-01 This book presents groundbreaking research schemes that are shaping the future of big memory systems Large scale persistent and byte addressable memory eliminates traditional storage bottlenecks by unifying memory and storage hierarchies For engineers and architects building next generation databases and distributed systems these innovations deliver transformative performance faster persistent writes through optimized flush mechanisms the reduced contention via lock free designs and high throughput using GPU acceleration Each chapter presents fully implemented architectures in real world environments from learned indexes to RDMA powered transactions together with deployable code patterns and performance benchmarks This book shows new devices are leveraging big memory to achieve low latency persistence hardware accelerated data processing and linear scalability in distributed environments Designed for professionals with operating systems fundamentals this book bridges cutting edge research with practical implementation where big memory s unique characteristics persistence at DRAM speeds massive capacity and fine grained access demand fundamentally new architectural approaches Learn how to achieve faster queries with learned indexes in the disaggregated memory how to optimize cuckoo hashing for persistent memory s asymmetric costs and why the latest GPUs incorporate these persistence techniques This book also provides efficient and useful toolkits the RDMA protocols have been adopted in storage tiers while the lock free designs improve real time recommendation systems Whether building cloud native databases low latency recommendation systems or memory driven AI services these solutions will help exploit the full potential of the big memory

GPU Programming in MATLAB Nikolaos Ploskas, Nikolaos Samaras, 2016-08-25 GPU programming in MATLAB is intended for scientists engineers or students who develop or maintain applications in MATLAB and would like to accelerate their codes using GPU programming without losing the many benefits of MATLAB The book starts with coverage of the Parallel Computing Toolbox and other MATLAB toolboxes for GPU computing which allow applications to be ported straightforwardly onto GPUs without extensive knowledge of GPU programming The next part covers built in GPU enabled features of MATLAB including options to leverage GPUs across multicore or different computer systems Finally advanced material includes CUDA code in MATLAB and optimizing existing GPU applications Throughout the book examples and source codes illustrate every concept so that readers can immediately apply them to their own development Provides in depth comprehensive coverage of GPUs with MATLAB including the parallel computing toolbox and built in features for other MATLAB toolboxes Explains how to accelerate computationally heavy applications in MATLAB without the need to re write them in another language Presents case studies illustrating key concepts across multiple fields Includes source code sample datasets and lecture slides

Deep Learning at Scale Suneeta Mall, 2024-06-18. Bringing a deep learning project into production at scale is quite challenging. To successfully scale your project, a foundational understanding of full stack deep learning, including the knowledge that lies at the intersection of hardware, software, data, and algorithms, is required. This book illustrates complex concepts of full stack deep learning and reinforces them through hands-on exercises to arm you with tools and techniques to scale your project. A scaling effort is only beneficial when it's effective and efficient. To that end, this guide explains the intricate concepts and techniques that will help you scale effectively and efficiently. You'll gain a thorough understanding of how data flows through the deep learning network and the role the computation graphs play in building your model. How accelerated computing speeds up your training and how best you can utilize the resources at your disposal. How to train your model using distributed training paradigms, i.e., data, model, and pipeline parallelism. How to leverage PyTorch ecosystems in conjunction with NVIDIA libraries and Triton to scale your model training. Debugging, monitoring, and investigating the undesirable bottlenecks that slow down your model training. How to expedite the training lifecycle and streamline your feedback loop to iterate model development. A set of data tricks and techniques and how to apply them to scale your training model. How to select the right tools and techniques for your deep learning project. Options for managing
