for power generation **Worker Health and Safety on Offshore Wind Farms** National Research Council (U.S.). Transportation Research Board. Committee on Offshore Wind Farm Worker Safety, 2013 TRB Special Report 310 Worker Health and Safety on Offshore Wind Farms examines the hazards and risks to workers on offshore wind farms on the outer continental shelf as compared with the hazards and risks to workers on offshore oil and gas operations. The report explores gaps and overlaps in jurisdictional authority for worker health and safety on offshore wind farms and evaluates the adequacy of and recommends enhancements to the existing safety management system (SMS) requirement published in 30 CFR 585.810. The study committee recommends that the U.S. Department of the Interior's Bureau of Ocean Energy Management (BOEM) adopt a full SMS rule for workers on offshore wind farms at a level of detail that includes the baseline elements identified in this report. An enhanced SMS rule should require the use of human factors engineering elements in the design process and should encompass all activities that the lessee and its contractors undertake. In collaboration with other regulatory agencies and industry stakeholders, BOEM should clearly define roles and responsibilities and indicate which standards could apply for all phases of wind farm development regardless of jurisdiction. Also with the help of stakeholders, BOEM should support the development of guidelines and recommended practices that could be used as guidance documents or adopted by reference.

Green Electricity Kendall Haven, 2011-03-30 This fascinating book explores the pros and cons of the top 25 green electricity technologies illuminating how each technology works and detailing the key hurdles each emerging energy strategy has to overcome before it becomes a viable option. Our existing electric utility industry and power supply and delivery systems are woefully outdated. Indeed the existing power grid we use today uses 100 year old technology. This book lays out the possible blueprints for a greener future in a way that will engage middle school learners enabling students and teachers to explore the emerging energy technologies that could become the future of our electrical supply system. In Part 1 of *Green Electricity 25 Green Technologies That Will Electrify Your Future* the author describes the amazing patchwork of 1,300 power plants and over 5 million miles of wire that comprise our national grid and reveals the environmental damages it produces. Part 2 examines the 25 leading ecofriendly contenders to modernize and replace our current grid describing each proposed technology and how it works. Other relevant information is also provided such as a qualitative assessment of the pluses, minuses and limitations of each system and an assessment of that technology's potential to contribute to our future electrical appetite.
