Google Maps Prices Returns:

Diminishing Returns Lucio Baccaro, Mark Blyth, Jonas Pontusson, 2022 A set of state of the art empirical analyses at the country regional and global level that work from a new theoretical framework that analyzes the politics of growth and stagnation. As highlighted by the recent debate on secular stagnation economic growth has slowed down considerably and this has given rise to a host of new problems from financial instability to the collapse of mainstream parties. What happens when growth the main mechanism of capitalist legitimization is harder to come by and less broadly shared. And how should we think about capitalist diversity in the context of global stagnation. In *Diminishing Returns* Lucio Baccaro, Mark Blyth and Jonas Pontusson address these questions by bringing together a number of comparative and international political economists with expertise across many different countries and regions. Going beyond the methodological nationalism common in most comparative research each author departs from a common theoretical framework the Growth Model Perspective and contributes to develop it further. The outcome is a new theoretical framework to help social scientists, policymakers and opinion makers understand the politics of growth and stagnation which offers state of the art empirical analyses at the country regional and global level.

Harnessing External Data in Public and Private Market Investing Adam D. Nahari,2023 Data science is playing an increasingly central role in fundamental investing This development has been driven by growing awareness of the ways in which external data can be leveraged to create unique insights and support decision making across the investment lifecycle Two important trends have undergirded this development The first has been the rapid growth in the volume and granularity of data available to investors either publicly or through data vendors The second has been the growth in technical talent with expertise in such analyses for example the relatively recent emergence of roles like data engineers and data scientists and technologies that make such analyses easier to perform These trends have enabled investors to examine and evaluate company performance more transparently and to suggest new insights and levers for improvement In this thesis we propose a generalizable method of evaluating the value of an external data source We focus specifically on customer review data and investigate whether customer review data provides a signal of stock price movement that is not accurately or immediately priced by the stock market We also evaluate whether this signal varies meaningfully across industries and whether it can be monetized effectively in a trading strategy We evaluate these questions by examining data from companies Google reviews and analyzing the subsequent price action of the respective companies shares Our approach can be easily extended to examine other sources of data and their impact on a number of performance metrics such as earnings per share free cash flow revenue etc As mentioned we seek to determine whether an investor can derive significant value from online Google maps reviews To test our ideas we create a backtesting engine that simulates buying or short selling stocks based on positive or negative changes in review scores respectively over varying time horizons and holding the long or short positions for various lengths of time prior to exiting the position Ultimately we find that a backtesting framework that goes long or short on each stock in a portfolio based on whether the respective company's rating increased or decreased over a period of time

can indeed produce above market returns at below market risk There is notable variation in returns and standard deviations of returns as the parameters of the score change period and holding period change with the most favorable returns and risk return trade offs concentrated in strategies that employ longer score change and holding periods In addition we find substantial variation in returns across industries and this also changes considerably from one strategy parameter set to another Also the returns from long positions were considerably better than those from short positions indicating that increases in review scores are much more reliable predictors of increases in stock prices than decreases in review scores are as predictors of declines in stock prices however this is a bit misleading since the backtest period was a time of immense growth in equities across the board We recognize that this analysis leaves ample opportunity to improve upon its strategy and develop further strategies for various other data sources *List of Original Issue Discount Instruments* ,1988 Retail Food Prices by Cities ,1948 Consumer Prices ,1940-12 *Retail Prices and Cost of Living Series* ...
