*Emerging Computer Technologies 2* Ömer Aydin, Radosveta Sokullu, Özkan Akin, Erginay Aslan, Oliver Simonoski, Ninoslav Marina, Natasa Paunkoska (Dimoska), Izabela Mitreska, Mustafa Ceyhan, Enis Karaarslan, 2022-12-31. There is rapid development and change in the field of computer science today. These affect all areas of life. Emerging topics in computer science are covered in this book. In the first chapter a specific IoT application called a smart mailbox with face recognition which uses cellular connectivity and image processing to securely deliver valuable documents. The prototype for this system includes a fingerprint reader camera electromagnetic lock and various other components connected to an Arduino Uno and a Raspberry Pi and uses OpenCV and Python software for face detection and recognition. In the second chapter authors compares and evaluates the main characteristics of 5G channels and the performance of two channel coding candidates low density parity check LDPC codes and polar codes. The analysis considers block error rate bit error rate computational complexity and flexibility and finds that polar codes outperform LDPC code systems though LDPC is still a viable option compared to other code systems. The third chapter focuses on how to reliably process and store DNA sequences in EHR systems without any modifications. To achieve this the authors introduce a coding technique and evaluate its effectiveness using the Hamming code and Reed Solomon coding schemes on a sample data set. The results show that the Reed Solomon coding scheme outperforms the Hamming code in terms of error detection and correction for securely processing DNA records to EHR systems. The next chapter investigates

the robustness of AI models trained on thyroid ultrasound images using different convolutional neural network CNN architectures VGG19 Xception ResNet50V2 and EfficientNetB2 against adversarial attacks using the fast gradient sign method FGSM basic iterative method BIM and projected gradient descent PGD techniques In the fifth chapter it was questioned whether artificial intelligence could write an academic article In this direction an academic article was created and evaluated by OpenAI ChatGPT The final chapter proposes an application to measure RF signal intensities in urban areas and use that information to estimate the amount of energy that can be harvested from these signals This information is then presented to users through a geographical information system **Quick Start Guide to Large Language Models** Sinan Ozdemir,2024-09-26 The Practical Step by Step Guide to Using LLMs at Scale in Projects and Products Large Language Models LLMs like Llama 3 Claude 3 and the GPT family are demonstrating breathtaking capabilities but their size and complexity have deterred many practitioners from applying them In Quick Start Guide to Large Language Models Second Edition pioneering data scientist and AI entrepreneur Sinan Ozdemir clears away those obstacles and provides a guide to working with integrating and deploying LLMs to solve practical problems Ozdemir brings together all you need to get started even if you have no direct experience with LLMs step by step instructions best practices real world case studies and hands on exercises Along the way he shares insights into LLMs inner workings to help you optimize model choice data formats prompting fine tuning performance and much more The resources on the companion website include sample datasets and up to date code for working with open and closed source LLMs such as those from OpenAI GPT 4 and GPT 3 5 Google BERT T5 and Gemini X Grok Anthropic the Claude family Cohere the Command family and Meta BART and the LLaMA family Learn key concepts pre training transfer learning fine tuning attention embeddings tokenization and more Use APIs and Python to fine tune and customize LLMs for your requirements Build a complete neural semantic information retrieval system and attach to conversational LLMs for building retrieval augmented generation RAG chatbots and AI Agents Master advanced prompt engineering techniques like output structuring chain of thought prompting and semantic few shot prompting Customize LLM embeddings to build a complete recommendation engine from scratch with user data that outperforms out of the box embeddings from OpenAI Construct and fine tune multimodal Transformer architectures from scratch using open source LLMs and large visual datasets Align LLMs using Reinforcement Learning from Human and AI Feedback RLHF RLAIF to build conversational agents from open models like Llama 3 and FLAN T5 Deploy prompts and custom fine tuned LLMs to the cloud with scalability and evaluation pipelines in mind Diagnose and optimize LLMs for speed memory and performance with quantization probing benchmarking and evaluation frameworks A refreshing and inspiring resource Jam packed with practical guidance and clear explanations that leave you smarter about this incredible new field Pete Huang author of The Neuron Register your book for convenient access to downloads updates and or corrections as they become available See inside book for details **Rethinking Informed Consent in the Big Data Age** Adam J. Andreotta,2024-12-23 In the big

data age providing informed consent online has never been more challenging. Countless companies collect and share our personal data through devices, apps and websites fuelling a growing data economy and the emergence of surveillance capitalism. Few of us have the time to read the associated privacy policies and terms and conditions and thus are often unaware of how our personal data are being used. This is a problem as in the last few years large tech companies have abused our personal data. As privacy self management through the mechanism of providing online consent has become increasingly difficult, some have argued that surveillance capitalism and the data economy more broadly need to be overthrown. This book presents a different perspective. It departs from the concept of revolutionary change to focus on pragmatic incremental solutions tailored to everyday contexts. It scrutinises how consent is currently sought and provided online and offers suggestions about how online consent practices can be improved upon. These include the possibility of subjecting consent gathering practices to ethics committees for review, the creation of visual based consent agreements and privacy policies to help with transparency and engagement, the development of software to protect privacy and the idea of automated consent functionalities that allow users to bypass the task of reading vast amounts of online consent agreements. The author suggests that these small scale changes to online consent obtaining procedures could, if successfully implemented, provide us with a way of self managing our privacy in a way that avoids a revolutionary dismantling of the data economy. In the process readers are encouraged to rethink the very purpose of providing informed consent online. *Rethinking Informed Consent in the Big Data Age* will appeal to researchers in normative ethics, applied ethics, philosophy of law and the philosophy of AI. It will also be of interest to business scholars, communication researchers, students and those in industry.

*Empire of AI* Karen Hao, 2025-05-20 A NEW YORK TIMES BESTSELLER An eye opening account of the tech arms race shaping out planet from an award winning journalist and AI insider to the world of Sam Altman and OpenAI. When longtime AI expert and journalist Karen Hao first began covering OpenAI in 2019 she thought they were the good guys. Founded as a nonprofit with safety enshrined as its core mission, it was meant its leader Sam Altman told us to act as a check against more purely market forces. But the core truth of this massively disruptive sector is that it requires an unprecedented amount of proprietary resources: the compute power of scarce high end chips, the sheer volume of data that needs to be amassed at scale, the humans on the ground cleaning it up for sweatshop wages throughout the Global South and a truly alarming spike in the need for energy and water underlying everything. We have entered a new ominous age of empire with OpenAI setting a breakneck pace as a small group of the most valuable companies in human history try to chase it down. In exhilarating prose and with unparalleled access to those closest to Sam Altman, Hao recounts the meteoric rise of OpenAI and shows us the sinister impact that this industry is having on society. [A Review of Recent Advancements in Deep Reinforcement Learning](#) Artur Sahakjan, 2018-08-02 Bachelor Thesis from the year 2018 in the subject Computer Science Commercial Information Technology grade 1.0 University of Duisburg Essen language English abstract Reinforcement learning is a learning problem

in which an actor has to behave optimally in its environment Deep learning methods on the other hand are a subclass of representation learning which in turn focuses on extracting the necessary features for the task e g classification or detection As such they serve as powerful function approximators The combination of those two paradigm results in deep reinforcement learning This thesis gives an overview of the recent advancement in the field The results are divided into two broad research directions value based and policy based approaches This research shows several algorithms from those directions and how they perform Finally multiple open research questions are addressed and new research directions are proposed
