Designing Embedded Systems with 32-Bit PIC Microcontrollers and MikroC Dogan Ibrahim, 2013-08-22 The new generation of 32 bit PIC microcontrollers can be used to solve the increasingly complex embedded system design challenges faced by engineers today. This book teaches the basics of 32 bit C programming including an introduction to the PIC 32 bit C compiler. It includes a full description of the architecture of 32 bit PICs and their applications along with coverage of the relevant development and debugging tools. Through a series of fully realized example projects, Dogan Ibrahim demonstrates how engineers can harness the power of this new technology to optimize their embedded designs. With this book, you will learn The advantages of 32 bit PICs The basics of 32 bit PIC programming The detail of the architecture of 32 bit PICs How to interpret the Microchip data sheets and draw out their key points How to use the built in peripheral interface devices including SD cards, CAN and USB interfacing How to use 32 bit debugging tools such as the ICD3 in circuit debugger, mikroCD in circuit debugger and Real Ice emulator. Helps engineers to get up and running quickly with full coverage of architecture, programming and development tools. Logical application oriented structure progressing through a project development cycle from basic operation to real world applications. Includes practical working examples with block diagrams, circuit diagrams, flowcharts, full software listings and an in depth description of each operation.

Using LEDs, LCDs and GLCDs in Microcontroller Projects Dogan Ibrahim, 2012-08-22 Describing the use of displays in microcontroller based projects, the author makes extensive use of real world tested projects. The complete details of each project are given including the full circuit diagram and source code. The author explains how to program microcontrollers in C language with LED, LCD and GLCD displays and gives a brief theory about the operation, advantages and disadvantages of each type of display. Key features: Covers topics such as displaying text on LCDs, scrolling text on LCDs, displaying graphics on GLCDs, simple GLCD based games, environmental monitoring using GLCDs, e.g. temperature displays. Uses C programming throughout the book, the basic principles of programming using C language and introductory information about PIC microcontroller architecture will also be provided. Includes the highly popular PIC series of microcontrollers using the medium range PIC18 family of microcontrollers in the book. Provides a detailed explanation of Visual GLCD and Visual TFT with examples. Companion website hosting program listings and data sheets. Contains the extensive use of visual aids for designing LED, LCD and GLCD displays to help readers to understand the details of programming the displays. Screen shots, tables, illustrations and figures as well as end of chapter exercises. Using LEDs, LCDs and GLCDs in Microcontroller Projects is an application oriented book providing a number of design projects making it practical and accessible for electrical, electronic, engineering and computer engineering senior undergraduates and postgraduates. Practising engineers designing microcontroller based devices with LED, LCD or GLCD displays will also find the book of great use.
