### MINERVA® Marine Panel Range

MINERVA® MX is a comprehensive range of fire controllers designed and built to ECEN/IEC60600 1/2 and EN1024. An advanced proven microprocessor based system, MINERVA® MX provides conventional and digital addressable detection for new, refurbished and refitted detection systems.

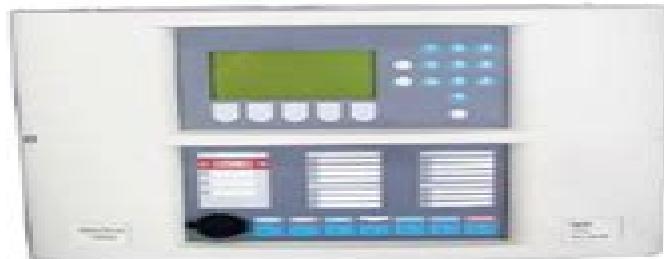

A wide range of detectors and ancillaries makes MINERVA® MX suitable for applications from general cargo vessels to large passenger vessels and offshore installation.

### What should you expect of your fire detection system?

In broad terms: cost effective, reliability and flexibility. In today's vessels, under today's conditions you should also be looking for ease of operation, flexible programming, precise fire source pin pointing and the kind of circuitry and sensitivity which ensures rapid activation in the event of a fire.

MINERVA® MX meets all these expectations, as a matter of course. MX/T2000 is a comprehensive range of fire controllers designed and built to ECEN/IEC60600 1/2 by the world's leading fire and security company. The MX/T2000 has been approved by all the major marine authorities.

An advanced proven micro-processor based system, MINERVA® MX provides conventional and addressable detection at the price of today's conventional systems. The decision to sound the alarm is made at the controller allowing adjustments

and compensations to be made for changes in environmental conditions. In short, maximum security whilst minimising the risk of false alarms.

Modular in design MINERVA® MX provides economical fire detection for small vessels, but is also flexible enough to implement the complex event procedures required in larger ones. Detectors are controlled in groups of up to 240 zones all software configurable, so avoiding the expensive need to hardwire each zone back to the control panel. Further savings are made possible by harnessing the power of the latest micro-processing technology to enable a single loop of two core cabling to carry both detection and command signals.

Backwards compatibility is also achieved by using an ancillary module which allows existing fire systems to be updated and extended cost effectively, utilising existing wiring where possible and with minimal disruption. Other ancillary modules offer even greater system flexibility: short circuit sensing isolation ensures the MX/T2000 continues in operation, even if a wiring fault occurs. Local sounder activation further reduces wiring costs and switch monitoring allows easy interface to a vessel's machinery control systems.

Further flexibility and installation savings can be made using the loop power MX/T2000 options. Loop powered MX/T2000 panels allow sounders to be powered from the same loop-wires that carry communications and power to the detectors and other ancillaries.
