**Fundamentals of Engineering High-Performance Actuator**

**Systems** Kenneth Hummel,2016-12-01 Actuators are the key to allowing machines to become more sophisticated and perform complex tasks that were previously done by humans providing motion in a safe controlled manner As defined in this book actuator design is a subset of mechanical design It involves engineering the mechanical components necessary to make a product move as desired Fundamentals of Engineering High Performance Actuator Systems by Ken Hummel was written as a text to supplement actuator design courses and a reference to engineers involved in the design of high performance actuator systems It highlights the design approach and features what should be considered when moving a payload at precision levels and or speeds that are not as important in low performance applications The main areas covered in this book are Fundamentals of actuator design Actuator performance Loads that the actuator and its surrounding structure must accommodate Constraints which determine the type of load the actuator needs to accommodate The design margin applied to

components of any given design Environment which must include the interactions between product and the conditions it will have to perform under Component strength to ensure safety from failure Component stiffness Maintainability Reliability Cost

*Virtual Nonlinear Multibody Systems* Werner Schiehlen, Michael Valásek, 2012-12-06 This book contains an edited version of lectures presented at the NATO ADVANCED STUDY INSTITUTE on VIRTUAL NONLINEAR MULTIBODY SYSTEMS which was held in Prague Czech Republic from 23 June to 3 July 2002. Eighty six participants from twenty two countries representing academia industry government and research institutions attended the meeting. The high qualification of the participants contributed greatly to the success of the ADVANCED STUDY INSTITUTE in that it promoted the exchange of experience between leading scientists and young scholars and encouraged discussions to generate new ideas and to define directions of research and future developments. The full program of the ADVANCED STUDY INSTITUTE included also contributed presentations made by participants where different topics were explored among them. Such topics include nonholonomic systems flexible multibody systems contact impact and collision numerical methods of differential algebraical equations simulation approaches virtual modelling mechatronic design control biomechanics space structures and vehicle dynamics. These presentations have been reviewed and a selection will be published in this volume and in special issues of the journals *Multibody System Dynamics* and *Mechanics of Structures and Machines*
