Customer-Centric Innovation in Finance Erin B Taylor, Anette Broløs, 2024-04-03 The competition landscape of finance is changing fast and it has never been so important for the finance industry to truly understand their customers. Customer Centric Innovation in Finance helps finance and fintech innovators understand customers' behavioural motivations to drive effective product development. Relying on quantitative data is not enough; numbers can be great at telling us what people are doing but they often fail to explain why people do what they do. And if a service doesn't exist yet, there is no data to tell us how people use it. Human insights, behavioural science, and qualitative data add immense value to product development. Readers will learn to innovate smarter by getting a firm understanding of why customers like their solutions and how they adapt them to suit their needs. The book presents real-life examples throughout of how customers are changing their behaviour in response to a fast-evolving financial landscape and provides practical advice on how to transform such insights into innovation. It explores how to produce customer insights for services that don't exist yet, for instance, Central Bank Digital Currencies (CBDCs). It also provides descriptions of hands-on tools to build new insights and apply them to innovation, and of methodologies such as portable kits, personas, digital ethnography, observations, and interviews.

*Getting Skills Right: Training Supply for the Green and AI Transitions* Equipping Workers with the Right Skills OECD, 2024-12-11 Adult learning systems are being called upon to prepare workers for major labour market shifts, including the green transition and the rise of artificial intelligence (AI) in the workplace. While initial education is important, upskilling and reskilling the existing workforce is essential to help individuals and businesses adapt and prepare for these transitions. Policy makers face the challenge of ensuring training is both relevant and inclusive, yet there is limited understanding of whether current training supply is sufficient to meet current and future skill needs. Most research focuses on the demand for skills, with little insight into the supply. To fill this gap, this

report uses evidence from new OECD questionnaires and an analysis of training catalogues to evaluate whether current training supply aligns with the skills needed for the green and AI transitions It also provides insight into the accessibility and flexibility of training efforts to guide policy makers in their efforts to develop more effective inclusive training strategies
