**Trust and Distrust in Digital Economies** Philippa Ryan, 2019-05-30 In digital economies the Internet enables the platformisation of everything. Big technology companies and mobile apps are running mega marketplaces supported by seamless online payments systems. This rapidly expanding ecosystem is fueled by data. Meanwhile perceptions of the global financial crisis, data breaches, disinformation and the manipulation of political sentiment have combined to create a modern trust crisis. A lack of trust constrains commerce particularly in terms of consumer protection and investment. Big data, artificial intelligence, automated algorithms and blockchain technology offer new solutions and risks. Trust in our legal systems depends on certainty, consistency and enforceability of the law. However, regulatory and remedial gaps exist because the law has not kept up with technology. This work explores the role of competency and good faith in the creation of social and legal relationships of trust and the need for governance, transparency and human accountability to combat distrust particularly in digital economies.

**Harnessing the Power of Technology to Improve Lives** Luc de Witte, 2017-09-15 The lives of people with disabilities are complex and various and there are many situations where technology particularly assistive technology already makes a real difference. It is clear that smart phone and tablet computer based solutions continue to enhance the independence of many users but it is also important that more traditional assistive technologies and services are not forgotten or neglected. This book presents the proceedings of the 14th conference of the Association for the Advancement of Assistive Technology in Europe AAATE 2017 entitled Harnessing the power of technology to improve lives held in Sheffield UK in September 2017. This 4 day event about assistive technologies AT highlights the association's interest in innovating not only technology but also services and addresses the global challenge of meeting the needs of the increasing number of people who could benefit from assistive technology. The 200 papers in the book are grouped under 30 subject headings and include contributions on a wide range of topical subjects including aging well and dementia care, robotics, eHealth and apps, innovations, universal design, sport and disordered speech. The breadth of the AAATE conference reflects people's life needs and so the book is sure to contain something of interest to all those whose work involves the design, development and use of assistive technology whatever the situation. The photo on the front cover illustrates the breadth of assistive technologies that can improve lives. Photographer: Simon Butler.
