more wide ranging than this It is also changing opportunities to discuss economic matters whether public or personal have proliferated online while new payment systems and shopping platforms embed economic behaviour more deeply into communications infrastructures Challenging earlier narrow definitions this ambitious book offers a new framework for thinking about the role of communication in our economic lives Foregrounding the broader category of communicative practices the book understands economic life not only in terms of the macro economy but more sociologically as a set of processes of providing for material wants and needs How we talk about these wants and needs and our means for meeting them is how we come to understand our economic lives as meaningful The book explores how our economic lives are constructed communicatively in a variety of modes that move through but also exceed mass media from the symbolism of credit cards to the language used by economists and from social media promotion to debates in online forums Communication and Economic Life is a vital resource for students and scholars in media and communications and sociology and for anyone interested in how we talk about economic lives **Data for the People** Andreas Weigend,2017-01-31 A long time chief data scientist at Amazon shows how open data can make everyone not just corporations richer Every time we Google something Facebook someone Uber somewhere or even just turn on a light we create data that businesses collect and use to make decisions about us In many ways this has improved our lives yet we as individuals do not benefit from this wealth of data as much as we could Moreover whether it is a bank evaluating our credit worthiness an insurance company determining our risk level or a potential employer deciding whether we get a job it is likely that this data will be used against us rather than for us In Data for the People Andreas Weigend draws on his years as a consultant for commerce education healthcare travel and finance companies to outline how Big Data can work better for all of us As of today how much we benefit from Big Data depends on how closely the interests of big companies align with our own Too often outdated standards of control and privacy force us into unfair contracts with data companies but it doesn t have to be this way Weigend makes a powerful argument that we need to take control of how our data is used to actually make it work for us Only then can we the people get back more from Big Data than we give it Big Data is here to stay Now is the time to find out how we can be empowered by it *Artificial Intelligence in Accounting* Othmar M. Lehner,Carina Knoll,2022-08-05 Artificial intelligence AI and Big Data based applications in accounting and auditing have become pervasive in recent years However research on the societal implications of the widespread and partly unregulated use of AI and Big Data in several industries remains scarce despite salient and competing utopian and dystopian narratives This book focuses on the transformation of accounting and auditing based on AI and Big Data It not only provides a thorough and critical overview of the status quo and the reports surrounding these technologies but it also presents a future outlook on the ethical and normative implications concerning opportunities risks and limits The book discusses topics such as future human machine collaboration cybernetic approaches to decision making and ethical guidelines for good corporate governance of AI based algorithms and Big Data in accounting

and auditing It clarifies the issues surrounding the digital transformation in this arena delineates its boundaries and highlights the essential issues and debates within and concerning this rapidly developing field The authors develop a range of analytic approaches to the subject both appreciative and sceptical and synthesise new theoretical constructs that make better sense of human machine collaborations in accounting and auditing This book offers academics a variety of new research and theory building on digital accounting and auditing from and for accounting and auditing scholars economists organisations and management academics and political and philosophical thinkers Also as a landmark work in a new area of current policy interest it will engage regulators and policy makers reflective practitioners and media commentators through its authoritative contributions editorial framing and discussion and sector studies and cases **Information Technology - New Generations** Shahram Latifi,2018-04-12 This volume presents a collection of peer reviewed scientific articles from the 15th International Conference on Information Technology New Generations held at Las Vegas The collection addresses critical areas of Machine Learning Networking and Wireless Communications Cybersecurity Data Mining Software Engineering High Performance Computing Architectures Computer Vision Health Bioinformatics and Education **Editor & Publisher International Year Book** ,2000 The encyclopedia of the newspaper industry *PC Magazine* ,1994 *Database End-user* ,1989 *PC* ,1983-11 *Macworld* ,1992 **Hack Recruiting** Victor Assad,2019-07-23 Praise for Hack Recruiting It is a brilliant piece of work A must read for those of us in global corporations or companies of any size really that seek to act NOW Julia Martensen Head of HR Strategy and Innovation at DB Schenker Victor Assad uncovers longstanding empirical research from I O psychologists on how to best match job candidates to jobs and the best of today s digital technology He sees a world that is emerging today in which AI ontologies which are identifying information and relationships about today s global and diverse workforces will make significant improvements for matching candidates to jobs while reducing recruiting cycle times costs and selection biases Victor points out that HR now has the digital tools it needs to dramatically transform recruiting and the role of the recruiter HR can now build strategic talent pools improve the employee experience and digitally collect insightful analytics that will open up a new era of understanding on what truly drives employee performance and innovation Angela Hood Founder and CEO of ThisWay Global Must read book if you are a recruiter or talent acquisition head It goes over best practices and hacks each step of recruiting Sandeep Purwar Founder CEO Bevov **Technological Innovation, Supply Chain Trade, and Workers in a Globalized World** David Dollar,World Bank (Washington, D.C.),Emmanuelle Ganne,Victor Stolzenburg,Zhi Wang,2019 This report takes stock of the evolution of global value chains GVCs in light of technological developments such as robotics big data and the Internet of Things It discusses how these technologies are reshaping GVCs and examines the effect of these changes on labor markets in developed and developing economies and on supply chain management The report discusses how technological developments are creating new opportunities for the participation of small and medium sized enterprises in global value chains and reviews
