Middleware For Communications Middleware For Communications:

Middleware for Communications Qusay Mahmoud, 2005-06-10 A state of the art guide to middleware technologies and their pivotal role in communications networks Middleware is about integration and interoperability of applications and services running on heterogeneous computing and communications devices The services it provides including identification authentication authorization soft switching certification and security are used in a vast range of global appliances and systems from smart cards and wireless devices to mobile services and e Commerce Qusay H Mahmoud has created an invaluable reference tool that explores the origins and current uses of middleware highlighting the importance of such technologies as CORBA J2EE and JMS and has thus compiled the roadmap to future research in this area Middleware for Communications discusses the emerging fields of Peer to Peer P2P and grid middleware detailing middleware platforms such as JXTA and the Globus middleware toolkit shows how Middleware will play a significant role in mobile computing presents a Platform Supporting Mobile Applications PLASMA a middleware platform that consists of components for location event and profile handling of Location Based Services introduces middleware security focusing on the appropriate aspects of CORBA J2EE and NET and demonstrates how to realize complex security capabilities such as role based access control RBAC and mandatory access control MAC discusses how Quality of Service QoS component middleware can be combined with Model Driven Architecture MDA technologies to rapidly develop generate assemble and deploy flexible communications applications This incomparable overview of middleware for communications is suitable for graduate students and researchers in communications and computing departments It is also an authoritative guide for engineers and developers working on distributed systems mobile computing and networked appliances

Proceedings of International Conference on Communication and Networks Nilesh Modi, Pramode Verma, Bhushan Trivedi, 2017-04-07 The volume contains 75 papers presented at International Conference on Communication and Networks COMNET 2015 held during February 19 20 2016 at Ahmedabad Management Association AMA Ahmedabad India and organized by Computer Society of India CSI Ahmedabad Chapter Division IV and Association of Computing Machinery ACM Ahmedabad Chapter The book aims to provide a forum to researchers to propose theory and technology on the networks and services share their experience in IT and telecommunications industries and to discuss future management solutions for communication systems networks and services It comprises of original contributions from researchers describing their original unpublished research contribution The papers are mainly from 4 areas Security Management and Control Protocol and Deployment and Applications The topics covered in the book are newly emerging algorithms communication systems network standards services and applications

Introduction to Multimedia Communications Kamisetty Rao, Zoran Bojkovic, Dragorad Milovanovic, 2006-02-02 A comprehensive resource on multimedia communications Covers recent trends and standardization activities in multimedia communications such as layered structures underlying theories and the current best design techniques Describes the

convergence of various technologies including communications broadcasting information technology and home electronics and emerging new communication services and applications resulting from the growth of the Internet and wireless technologies Please go to www.ee.uta.edu/dip for additional information *Communications Middleware for Tactical Environments: Observations, Experiences, and Lessons Learned*, 2009 Tactical networking environments present significant challenges that must be overcome in order to effectively support net centric warfare The wireless and ad hoc nature of these networks implies unreliable connectivity limited bandwidth and variable latency Past and current research has focused on physical and data link layers routing protocols transport protocols and cross layer aspects However significant work is needed at the upper layers to better support application requirements In our experience achieving effective communications in tactical environments requires taking into account application requirements and communication patterns designing a rich interface between the application and communication layers and realizing a communications middleware specifically adapted to tactical networks In this article we report on our observations from several tactical networking experiments and demonstrations and the lessons learned from deployment of the Mockets middleware to support tactical communications We hope these experiences are useful to others designing and implementing applications and systems for tactical environments

Middleware for Network Eccentric and Mobile Applications Benoît Garbinato, Hugo Miranda, Luís Rodrigues, 2009-02-07 Middleware is a critical foundation needed to leverage the development of a wide range of mobile and ubiquitous applications Intrinsic challenges when building such middleware require the combination of expertise from areas like distributed systems networking software engineering and application development This textbook provides a comprehensive introduction to the main fundamental problems technologies paradigms and solutions of concern to developers of middleware for mobile environments The contributions are grouped into four parts on networking and programming issues communication models middleware issues and application issues Each chapter is structured as a self contained tutorial presenting an overview of a specific topic and the state of the art solutions for the related problems In addition the book also includes an authoritative reference list The material has been successfully used in several thematic training schools organized by the ESF MiNEMA Middleware for Network Eccentric and Mobile Applications program and the book's organization and presentation is ideal for an advanced course on middleware *Controller and Communications Middleware Survey and Evaluation*, 1998 There is a need for a standard core architecture to reduce the costs of developing and maintaining ground control systems for different satellites This report documents a survey and evaluation of next generation computing technology trends relevant to the need In addition to the advent of the Internet there are two Important on going evolutions impacting the area the migration to distributed client server computing and the paradigm shift to object oriented OO programming New application software is being developed based on a distributed object model and clients are tied to servers by software called middleware Available commercial off the shelf COTS controller and

communication middleware are evaluated for their applicability to satellite ground stations and for distributed processing distributed database access and distributed systems management Available products and vendors are listed Low cost satellite ground station application software with the flexibility to adapt as requirements change can be built using COTS available middleware Although most middleware frees the application developer from the need for network programming it nevertheless requires an experienced implementation staff for the selection of an integrated set of middleware products

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt,2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book s main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4 0
