Numerical Methods for Scientists and Engineers H.M. Antia, 2002-05-01 This book presents an exhaustive and in depth exposition of the various numerical methods used in scientific and engineering computations It emphasises the practical aspects of numerical computation and discusses various techniques in sufficient detail to enable their implementation in solving a wide range of problems

Introduction to Computational Engineering with MATLAB® Timothy Bower, 2022-09-28 Introduction to Computational Engineering with MATLAB aims to teach readers how to use MATLAB programming to solve numerical engineering problems The book focuses on computational engineering with the objective of helping engineering students improve their numerical problem solving skills The book cuts a middle path between undergraduate texts that simply focus on programming and advanced mathematical texts that skip over foundational concepts feature cryptic mathematical expressions and do not provide sufficient support for novices Although this book covers some advanced topics readers do not need prior computer programming experience or an advanced mathematical background Instead the focus is on learning how to leverage the computer and software environment to do the hard work The problem areas discussed are related to data driven engineering statistics linear algebra and numerical methods Some example problems discussed touch on robotics control systems and machine learning Features Demonstrates through algorithms and code segments how numeric problems are solved with only a few lines of MATLAB code Quickly teaches students the basics and gets them started programming interesting problems as soon as possible No prior computer programming experience or advanced math skills required Suitable for students at undergraduate level who have prior knowledge of college algebra trigonometry and are enrolled in Calculus I MATLAB script files functions and datasets used in examples are available for download from <http://www.routledge.com> 9781032221410

MATLAB and Simulink in Action Dingyü Xue, Feng Pan, 2024-05-08 The textbook is intended for teaching MATLAB language and its applications The book is composed of three parts MATLAB programming scientific computing with MATLAB and system simulation with Simulink Since MATLAB is widely used in all fields of science and engineering a good introduction to the language can not only help students learn how to use it to solve practical problems but also provide them with the skills to use MATLAB independently in

their later courses and research The three parts of the book are well balanced and tailored to the needs of engineering students and the mathematical problems commonly encountered in engineering can be easily solved using MATLAB This textbook is suitable for undergraduate and graduate students majoring in science and engineering The study guide of this textbook could be accessed via <http://sn.pub.thGR7v> This website provides links to recorded teaching videos MATLAB toolbox for the book interactive slide decks files in Powerpoint documents and solution manuals by the authors **Medical**
