This research aims to achieve a fundamental understanding of synchronization and its interplay with the topology of complex networks Synchronization is a ubiquitous phenomenon observed in different contexts in physics chemistry biology medicine and engineering Most prominently synchronization takes place in the brain where it is associated with several cognitive capacities but is in abundance a characteristic of neurological diseases Besides zero lag synchrony group and cluster states are considered enabling a description and study of complex synchronization patterns within the presented theory Adaptive control methods are developed which allow the control of synchronization in scenarios where parameters drift or are unknown These methods are therefore of particular interest for experimental setups or technological applications The theoretical framework is demonstrated on generic models coupled chemical oscillators and several detailed examples of neural networks      *Nonlinearity* ,2009-04      **Electrical & Electronics Abstracts** ,1997      **Computer & Control Abstracts** ,1996      *Proceedings* ,2003      **Synchronization and Control in Time-delayed Complex Networks and Spatio-temporal Patterns** Santo Banerjee,Jürgen Kurths,Eckehard Schöll,2016      *Proceedings of the Eleventh ACM SIGACT-SIGMOD-SIGART Symposium on Principles of Database Systems* Association for Computing Machinery. *Modular Programming Languages* ,2000      *Coordination Languages and Models* ,1999      *Handbook of Physiology* Edward J. Masoro,1995 The aims of this new section of the Handbook of Physiology are two One is to present a source of basic knowledge about aging including research approaches for use by physiologists as well as other biologists not directly involved in aging research The other is to provide comprehensive information for gerontologists on the physiological characteristics of aging in mammals particularly humans The principles of biological gerontology are presented in Part I which includes discussions of approaches to the measurement of the rate of aging of populations the difficulty of assessing aging of the individual theoretical concepts regarding the nature of aging and conceptual issues concerning the relationship between aging and disease Methodological issues unique to aging research are presented in Part II The focus is on study design and analysis and on cell culture models animal models and human subject use Part III provides a detailed description of the cellular and noncellular aspects of aging This part also discusses the metabolic characteristics of aging In Part IV twelve chapters provide comprehensive coverage of the influence of age on the physiology of the nervous systems and the organism Interventions of aging processes proposed and established are the subject of Part V      **Handbook of Physiology** ,1977
