Microwave Antenna Technology: OSU Reflector Antenna Code. User's Manual, 1987 The major purpose of this research is to provide a computer aided analysis and design capability for microwave reflector antenna systems in the 1 40 GHz range This capability will allow for the prediction of antenna gain and antenna temperature performance of reflector antennas under various atmospheric conditions The analysis and design capability was accomplished in part by further development of the OSU Reflector Antenna Code The analysis capability of the Reflector Code was used to guide the design of the seven reflector antennas of both the focal point and Cassegrain types These seven reflector antenna designs were fabricated and tested The measured data obtained from these tests were used to validate the Reflector Antenna Code The use of the Reflector Antenna code is documented in Volume III of this final report This report documents the seven reflector antenna designs which were fabricated and measured to demonstrate and test the computer aided analysis and design capability Selected pattern and gain data calculated by the Reflector Antenna Code and the validating measured data are given A more comprehensive set of measured data for the seven reflector antenna designs is presented in Volume II of this final report

Far Field Reflector Antenna Computer Code (User's Manual). R. C. Rudduck, S. H. Lee, W. D. Burnside, OHIO STATE UNIV COLUMBUS ELECTROSCIENCE LAB., 1978 **Numerical Electromagnetics Code (NEC)-Reflector Antenna Code. Part I. User's Manual** R. C. Rudduck, S. H. Lee, OHIO STATE UNIV COLUMBUS ELECTROSCIENCE LAB., 1979 This report provides the necessary information to run a Fortran IV computer code by which the near field or the far field patterns of a typical Navy reflector antenna can be calculated This code was developed as part of a larger effort to develop computer models for simulating antennas at UHF and above frequencies in a complex ship environment The theoretical approach for computing the fields of the general reflector is based on a combination of the Geometrical Theory of Diffraction GTD and

Aperture Integration AI techniques Various examples are presented to illustrate the versatility of the codes as well as its operation Author **Numerical Electromagnetic Code (NEC)-Reflector Antenna Code: Part II. Code Manual** S. H. Lee, R. C. Rudduck, OHIO STATE UNIV COLUMBUS ELECTROSCIENCE LAB., 1979 The code manual documents a detailed explanation of the Numerical Electromagnetic code Reflector Antenna Code by which the near field and far field of a typical Navy reflector antenna can be calculated One important feature of the code is the capability for a general reflector rim shape Another important feature is the capability to input a practically arbitrary volumetric feed pattern Only the class of parabolic surfaces was implemented in the computer code The theoretical approach for computing the fields of the general reflector is based on a combination of the Geometrical Theory of Diffraction GTD and Aperture Integration AI techniques Typically AI is used to compute the main beam and near sidelobes GTD is used to compute the wide angle sidelobes and the backlobes The theoretical background on which the computer algorithms are based is described along with descriptions of the main program and the various subroutines For each subsection of the main program and subroutine the purpose and method are included accompanied by a flow diagram a key variable list and a listing of the code Author **Microwave Holographic Analysis of Large Reflector Antennas** Sean William Gilmore, 1988 **Reflector & Lens Antennas**, 1991

Wing-Mounted Antenna Code - User's Manual R. J. Marhefka, W. D. Burnside, OHIO STATE UNIV COLUMBUS ELECTROSCIENCE LAB., 1978 This report provides the necessary information to run a Fortran IV computer code which is used to analyze antenna patterns The antenna can be in the presence of various structures which can be simulated by finite flat plates an infinite ground plane and a finite elliptic cylinder For example the radiation pattern of an antenna mounted on the wing of an aircraft can be analyzed The computer code is theoretically based on the Geometrical Theory of Diffraction approach Various examples are presented to illustrate the versatility of the code as well as its subtleties Author
