*Econophysics and Companies* Hideaki Aoyama,Yoshi Fujiwara,Yuichi Ikeda,Hiroshi Iyetomi,Wataru Souma,2010-08-05 Econophysics is an emerging interdisciplinary field that takes advantage of the concepts and methods of statistical physics to analyse economic phenomena This book expands the explanatory scope of econophysics to the real economy by using methods from statistical physics to analyse the success and failure of companies Using large data sets of companies and income earners in Japan and Europe a distinguished team of researchers show how these methods allow us to analyse companies from huge corporations to small firms as heterogeneous agents interacting at multiple layers of complex networks They then show how successful this approach is in explaining a wide range of recent findings relating to the dynamics of companies With mathematics kept to a minimum the book is not only a lively introduction to the field of econophysics but also provides fresh insights into company behaviour

## **Rethinking Economics as Social Theory**

Richard E. Wagner,2022-11-11 Taking an innovative look at the origins of economics this forward thinking book relocates economics from a materialistic general theory of rational action into an idealistic theory of social organization and individual action Adding new insightful analytical methods such as complexity theory graph theory and computational modelling to the original insights of the Scottish Enlightenment Richard E Wagner explores economics in an ever changing society looking at the key civilizing processes and the important social questions

*Rewiring Financial Markets For Good* Charles Moore, The digital revolution post pandemic will lead to a radical departure from the traditional model of monetary exchange The creation of a Digital Financial Market Infrastructure will underpin the unbundling and re bundling of the functions of money within society Although digital money itself is not new to modern economies digital legal tender DLT facilitates instantaneous peer to peer transfers of value in a way that today is impossible The importance of digital connectedness will often supersede the importance of macroeconomic links and lead to the establishment of Digital Financial Markets linking the currency to membership of a particular financial market rather than to a specific country Capitalism underpins wealth generation and hence the existence of a digital financial market Capitalism is an economic system in which private individuals or corporations own and control the flow of capital throughout society Capitalism is built on the idea that compensation and profits derived from capital allocations reflect the relative contribution an individual or firm makes from the utilisation of

capital to the total wealth of a society The genius of capitalism lies in its ability to produce organic answers to most problems of scarcity and resource allocation Markets tend naturally to reward the ideas that prove most useful and to penalize dysfunctional behaviour They can bring about broad based outcomes that states cannot by driving vast numbers of individuals to adjust their behaviour in response to price signals Capital is the defining feature of modern economies that transforms mere wealth into an asset that creates more wealth Capital is the lifeblood of capitalist societies yet capital unequal distribution throughout the community codifies the widening wealth gap between the holders of capital and everybody else
