Yakovlev,2019-10-17 This volume contains selected tutorial and young scientist school papers of the 5th RAAI Summer School on Artificial Intelligence held in July 2019 at Institute of Physics and Technology MIPT campus in Dolgoprudny a suburb of Moscow Russia The 11 chapters in this volume present papers focusing on various important aspects of Multiagent systems Behavior planning Natural language processing Modeling of reasoning and Machine learning and data analysis Automated Configuration Problem Solving

Charles J. Petrie,2012-06-15 Automated Configuration has long been the subject of intensive research especially in Artificial Intelligence It is a pervasive problem to be solved and it is a good test of various knowledge representation and reasoning techniques The problem shows up in applications such as various electrical circuit design utility computing and even concurrent engineering Automated Configuration Problem Solving defines the ubiquitous problem illustrates the various solution techniques and includes a survey using these techniques from the mid 70 s until the mid 90 s During this time various general approaches were developed and then become more specialized This book covers the development of the general problem solving techniques for automated configuration which are based on both published academic work and patents

Web Service Composition Charles J. Petrie,2016-06-09 This book carefully defines the technologies involved in web service composition and provides a formal basis for all of the composition approaches and shows the trade offs among them By considering web services as a deep formal topic some surprising results emerge such as the possibility of eliminating workflows It examines the immense potential of web services composition for revolutionizing business IT as evidenced by the marketing of Service Oriented Architectures SOAs The author begins with informal considerations and builds to the formalisms slowly with easily understood motivating examples Chapters examine the importance of semantics for web services and ways to apply semantic technologies Topics included range from model checking and Golog to WSDL and AI planning This book is based upon lectures given to economics students and is suitable for business technologist with some computer science background The reader can delve as deeply into the technologies as desired **KI 2017: Advances**

book introduces a new logic based multi paradigm programming language that integrates logic programming functional

programming dynamic programming with tabling and scripting for use in solving combinatorial search problems including CP SAT and MIP mixed integer programming based solver modules and a module for planning that is implemented using tabling The book is useful for undergraduate and graduate students researchers and practitioners Closed Loop Management in Mineral Resource Extraction Jörg Benndorf, 2020-02-13 This book describes an innovative closed loop concept that allows the feedback of online data from operational monitoring to create mining intelligence The application of this concept promises significant improvements in economic and environmental key performance indicators for any mining operation Combining theory with industrial case studies the book guides readers through this process by providing theoretical background addressing practical issues related to operational implementation and illustrating the impact on selected examples This new concept is presented using the example of a bulk and gold mining application but is applicable at any mine where grade control is important The book is of interest to industrial professionals involved in operational monitoring mining intelligence and mine planning optimization as well as to researchers and academics in the field of applied geostatistics *Handbook of Constraint Programming* Francesca Rossi, Peter van Beek, Toby Walsh, 2006-08-18 Constraint programming is a powerful paradigm for solving combinatorial search problems that draws on a wide range of techniques from artificial intelligence computer science databases programming languages and operations research Constraint programming is currently applied with success to many domains such as scheduling planning vehicle routing configuration networks and bioinformatics The aim of this handbook is to capture the full breadth and depth of the constraint programming field and to be encyclopedic in its scope and coverage While there are several excellent books on constraint programming such books necessarily focus on the main notions and techniques and cannot cover also extensions applications and languages The handbook gives a reasonably complete coverage of all these lines of work based on constraint programming so that a reader can have a rather precise idea of the whole field and its potential Of course each line of work is dealt with in a survey like style where some details may be neglected in favor of coverage However the extensive bibliography of each chapter will help the interested readers to find suitable sources for the missing details Each chapter of the handbook is intended to be a self contained survey of a topic and is written by one or more authors who are leading researchers in the area The intended audience of the handbook is researchers graduate students higher year undergraduates and practitioners who wish to learn about the state of the art in constraint programming No prior knowledge about the field is necessary to be able to read the chapters and gather useful knowledge Researchers from other fields should find in this handbook an effective way to learn about constraint programming and to possibly use some of the constraint programming concepts and techniques in their work thus providing a means for a fruitful cross fertilization among different research areas The handbook is organized in two parts The first part covers the basic foundations of constraint programming including the history the notion of constraint propagation basic search methods global constraints tractability and computational

complexity and important issues in modeling a problem as a constraint problem The second part covers constraint languages and solver several useful extensions to the basic framework such as interval constraints structured domains and distributed CSPs and successful application areas for constraint programming Covers the whole field of constraint programming Survey style chapters Five chapters on applications *Essentials of Constraint Programming* Thom Frühwirth, Slim Abdennadher, 2013-03-14 The use of constraints had its scientific and commercial breakthrough in the 1990s Programming with constraints makes it possible to model and specify problems with uncertain incomplete information and to solve combinatorial problems as they are abundant in industry and commerce such as scheduling planning transportation resource allocation layout design and analysis This book is a short concise and complete presentation of constraint programming and reasoning covering theoretical foundations algorithms implementations examples and applications It is based on more than a decade of experience in teaching and research about this subject This book is intended primarily for graduate students researchers and practitioners in diverse areas of computer science and related fields including programming languages computational logic symbolic computation and artificial intelligence The book is complemented by a web page with teaching material software links and more We take the reader on a step by step journey through the world of constraint based programming and constraint reasoning Feel free to join in Acknowledgements Thorn thanks his wife Andrea and his daughter Anna for everything He dedicates his contribution to the book to the memory of his mother Grete Slim thanks his wife Nabila and his daughters Shirine and Amira for their ongoing support and patience *ERCIM/CologNet 2002* Barry O'Sullivan, 2003-04-07 This book constitutes the thoroughly refereed post proceedings of the Joint ERCIM CologNet International Workshop on Constraint Solving and Constraint Logic Programming held in Cork Ireland in June 2002 The 14 revised full papers presented were carefully selected for inclusion in the book during two rounds of reviewing and revision Among the topics addressed are verification and debugging of constraint logic programs modeling and solving CSPs explanation generation inference and inconsistency processing SAT and 0 1 encodings of CSPs soft constraints and constraint relaxation real world applications and distributed constraint solving **Recent Advances in Constraints** Krzysztof Apt, Francois Fages, Francesca Rossi, Peter Szeredi, Josef Vánčza, 2004-04-07 Constraint programming is the fruit of several decades of research carried out in mathematical logic automated deduction operations research and artificial intelligence The tools and programming languages arising from this research eldhaveenjoyedrealsuccessintheindustrialworldastheycontributetosolving hard combinatorial problems in diverse domains such as production planning communication networks robotics and bioinformatics This volume contains the extended and reviewed versions of a selection of papers presented at the Joint ERCIM CoLogNET International Workshop on Constraint Solving and Constraint Logic Programming CSCLP2003 which was held from June 30 to July 2 2003 The venue chosen for the seventh edition of this annual workshop was the Computer and Automation Research Institute of the Hungarian Academy of

Semirings for Soft Constraint Solving and Programming Stefano Bistarelli, 2004-07-16 Constraint satisfaction and constraint programming have shown to be very simple but powerful ideas with applications in various areas Still in the last ten years the simple notion of constraints has shown some deficiencies concerning both theory and practice typically in the way over constrained problems and preferences are treated For this reason the notion of soft constraints has been introduced with semiring based soft constraints and valued constraints being the two main general frameworks This book includes formal definitions and properties of semiring based soft constraints as well as their use within constraint logic

programming and concurrent constraint programming Moreover the author shows how to adapt existing notions and techniques such as abstraction and interchangeability to the soft constraint framework and it is demonstrated how soft constraints can be used in some application areas such as security Overall this book is a great starting point for anyone interested in understanding the basics of semiring based soft constraints *Recent Advances in Constraints* François Fages, Francesca Rossi, Sylvain Soliman, 2008-12-01 This book constitutes the thoroughly refereed and extended post workshop proceedings of the 12th Annual ERCIM International Workshop on Constraint Solving and Constraint Logic Programming CSCLP 2007 held in Rocquencourt France in June 2007 The 10 revised full papers presented were carefully reviewed and selected from 16 initial submissions The papers address all aspects of constraint and logic programming including foundational issues implementation techniques new applications as well as teaching issues Particular emphasis is placed on assessing the current state of the art and identifying future directions Principles and Practice of Constraint Programming John Hooker, 2018-08-22 This book constitutes the proceedings of the 24th International Conference on Principles and Practice of Constraint Programming CP 2018 held in Lille France in August 2018 The 41 full and 9 short papers presented in this volume were carefully reviewed and selected from 114 submissions They deal with all aspects of computing with constraints including theory algorithms environments languages models systems and applications such as decision making resource allocation scheduling configuration and planning The papers were organized according to the following topics tracks main technical track applications track CP and data science CP and music CP and operations research CP optimization and power system management multiagent and parallel CP and testing and verification
