Physics

Physics is a subject that helps us understand how the world around us works. It's like a big puzzle, and when we study physics, we're trying to figure out how all the pieces fit together.

One of the most important things to know about physics is that it's all about the laws of nature. These laws help explain how things move and why they move the way they do. For example, have you ever wondered why a ball thrown into the air comes back down to the ground? It's because of something called gravity. Gravity is a law of nature that pulls things toward each other. It's what keeps us on the ground and what makes things fall.

Another thing that physics helps us understand is how energy works. Energy is what makes things move and change. There are different types of energy like heat energy, light energy, and motion energy. Every time you turn on a light, you're using energy. And when you're running, you're using the energy stored in your muscles to move.

Physics also helps us understand how things are made. Everything in the world is made up of tiny little things called atoms. Atoms are like the building blocks of everything. They're so small that you can't see them with your eyes, but they're what everything is made of. When we put different atoms together, we can make different things. Like when we put Carbon and Hydrogen atoms together we get a molecule of Methane (CH_4).

It's not only about heavy and complex concepts, but physics also helps us in our daily lives in many ways, for example, physics helps us understand how different machines work. Things like cars, computers, and cell phones all use physics to make them work. The things we use every day wouldn't be possible without the laws of physics.

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy,Elizabeth S. Charles,James D. Slotta,Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
