## **Ontology Alignment Bridging The Semantic Gap Semantic Web And Beyond:**

*Ontology Alignment* Marc Ehrig, 2006-12-22 This book introduces novel methods and approaches for semantic integration. In addition to developing ground breaking new methods for ontology alignment the author provides extensive explanations of up to date case studies. It includes a thorough investigation of the foundations and provides pointers to future steps in ontology alignment with conclusion linking this work to the knowledge society. **The Semantic Web** Karl

Aberer, 2007-10-22 This book constitutes the refereed proceedings of the joint 6th International Semantic Web Conference ISWC 2007 and the 2nd Asian Semantic Web Conference ASWC 2007 held in Busan Korea in November 2007. The 50 revised full academic papers and 12 revised application papers presented together with 5 Semantic Web Challenge papers and 12 selected doctoral consortium articles were carefully reviewed and selected from a total of 257 submitted papers to the academic track and 29 to the applications track. The papers address all current issues in the field of the semantic Web ranging from theoretical and foundational aspects to various applied topics such as management of semantic Web data, ontologies, semantic Web architecture, social semantic Web as well as applications of the semantic Web. Short descriptions of the top five winning applications submitted to the Semantic Web Challenge competition conclude the volume. Ontology Matching Jérôme Euzenat, Pavel Shvaiko, 2007-06-15

Ontologies are viewed as the silver bullet for many applications but in open or evolving systems different parties can adopt different ontologies. This increases heterogeneity problems rather than reducing heterogeneity. This book proposes ontology matching as a solution to the problem of semantic heterogeneity offering researchers and practitioners a uniform framework of reference to currently available work. The techniques presented apply to database schema matching, catalog integration, XML schema matching and more. Social Networks and the Semantic Web Peter Mika, 2007-10-23

Science is like a tree contrary to popular belief both trees and science grow at their edges not at their core. For science this means that most of the fruitful and exciting developments are not happening at the core of established fields but are instead happening at the boundaries between such fields. This has been particularly true for Computer Science. The most interesting database developments don't happen inside the Database community but rather where databases hit Biology. Similarly the most interesting developments in Artificial Intelligence in recent years have happened where AI met the Web. The young field of Semantic Web research has been one of the results of a number of different sub-fields of Computer Science being exposed to the challenges of the Web: databases, computational linguistics, knowledge representation, knowledge based systems and service oriented computing are just some of the sub-fields that are all making contributions to the Semantic Web vision namely a Web that consists not only of links between web pages full of pictures and text but of a Semantic Web that consists of links between computer interpretable data. Such a Semantic Web would make it possible to query and reason over integrated data sets consisting of separate pieces of information that were never intended to be linked together but that can nevertheless be fruitfully combined and integrated sometimes even by a third party who

neither wrote nor owns any of the original pieces of data just as is possible with web pages on the current Web

**Ontology Engineering in a Networked World** Mari Carmen Suárez-Figueroa, Asunción Gómez-Pérez, Enrico Motta, Aldo Gangemi, 2012-03-23 The Semantic Web is characterized by the existence of a very large number of distributed semantic resources which together define a network of ontologies. These ontologies in turn are interlinked through a variety of different meta relationships such as versioning, inclusion and many more. This scenario is radically different from the relatively narrow contexts in which ontologies have been traditionally developed and applied and thus calls for new methods and tools to effectively support the development of novel network oriented semantic applications. This book by Suárez-Figueroa et al. provides the necessary methodological and technological support for the development and use of ontology networks which ontology developers need in this distributed environment. After an introduction in its second part, the authors describe the NeOn Methodology framework. The book's third part details the key activities relevant to the ontology engineering life cycle. For each activity, a general introduction, methodological guidelines and practical examples are provided. The fourth part then presents a detailed overview of the NeOn Toolkit and its plug-ins. Lastly, case studies from the pharmaceutical and the fishery domain round out the work. The book primarily addresses two main audiences: students and their lecturers who need a textbook for advanced undergraduate or graduate courses on ontology engineering and practitioners who need to develop ontologies in particular or Semantic Web based applications in general. Its educational value is maximized by its structured approach to explaining guidelines and combining them with case studies and numerous examples. The description of the open source NeOn Toolkit provides an additional asset as it allows readers to easily evaluate and apply the ideas presented.

**Cases on Semantic Interoperability for Information Systems Integration: Practices and Applications** Kalfoglou, Yannis, 2009-10-31 This book presents the use of semantic interoperability for a variety of applications ranging from manufacturing to tourism, e-commerce, energy, Grids, integration, geospatial systems, interoperability and automated agents interoperability for web services. Provided by publisher: Business Information Systems: Concepts, Methodologies, Tools and Applications Management Association, Information Resources, 2010-06-30 Business Information Systems: Concepts, Methodologies, Tools and Applications offers a complete view of current business information systems within organizations and the advancements that technology has provided to the business community. This four volume reference uncovers how technological advancements have revolutionized financial transactions, management infrastructure and knowledge workers.

*Human Computer Interaction*, 2009 This reference book penetrates the human computer interaction (HCI) field with a wide variety of comprehensive research papers aimed at expanding the knowledge of HCI. Provided by publisher: **Proceedings of the ... ACM International Workshop on Multimedia Databases**, 2003 The British National Bibliography Arthur James Wells, 2006 *MMDB 2003* Shu-Ching Chen, Mei-Ling Shyu, 2003 Ontology Management Martin Hepp, Pieter de Leenheer, Aldo de Moor, York Sure, 2007-10-23 Managing ontologies and annotated data

throughout their life cycles is at the core of semantic systems of all kinds. *Ontology Management*, an edited volume by senior researchers in the field, provides an up-to-date, concise and easy-to-read reference on this topic. This volume describes relevant tasks, practical and theoretical challenges, limitations and methodologies, plus available software tools. The editors discuss integrating the conceptual and technical dimensions with a business view on using ontologies by stressing the cost dimension of ontology engineering and by providing guidance on how up-to-date tooling helps to build, maintain and use ontologies. Also included is a one-stop reference on all aspects of managing ontological data and best practices on ontology management for a number of application domains. *Ontology Management* is designed as a reference or secondary text for researchers and advanced level students studying semantic systems. Semantic Web Services (SWS) and Web Services information systems data and knowledge engineering and the Semantic Web in general. Practitioners in industry will find this work invaluable as well.

**Approaching Ontology Alignment Through Representation Learning to Bridge the Semantic Gap in Engineering Applications** Prodromos Kolyvakis, 2020. Mots clés : l'auteur, ontology matching, ontology alignment, terminological embeddings, semantic similarity, denoising autoencoder, outlier detection, knowledge base completion, link prediction, knowledge graph embeddings, hyperbolic embeddings. *Library & Information Science Abstracts*, 2008. *Semantic Web: Ontology and Knowledge Base Enabled Tools, Services, and Applications* Sheth, Amit, 2013-03-31.

Semantic web continues to be an increasingly important system for allowing end users to share and communicate information online. *Semantic Web: Ontology and Knowledge Base Enabled Tools, Services, and Applications* focuses on the information systems discipline and the tools and techniques utilized for the emerging use of semantic web. Covering topics on semantic search, ontologies and recommendation systems, this publication is essential for academics, practitioners and industry professionals.

Terminological Ontologies Javier Lacasta, Javier Nogueras-Iso, Francisco Javier Zarazaga Soria, 2010-08-03. Information infrastructures are integrated solutions based on the fusion of information and communication technologies. They are characterized by the large amount of data that must be managed accordingly. An information infrastructure requires an efficient and effective information retrieval system to provide access to the items stored in the infrastructure. *Terminological Ontologies: Design, Management and Practical Applications* presents the main problems that affect the discovery systems of information infrastructures to manage terminological models and introduces a combination of research tools and applications in Semantic Web technologies. This book specifically analyzes the need to create, relate and integrate the models required for an infrastructure by elaborating on the problem of accessing these models in an efficient manner via interoperable services and components. *Terminological Ontologies: Design, Management and Practical Applications* is geared toward information management systems and semantic web professionals working as project managers, application developers, government workers and more. Advanced undergraduate and graduate level students, professors and researchers focusing on computer science will also find this book valuable as a secondary text or reference.

book     **Ontology Learning and Population** Paul Buitelaar,Philipp Cimiano,2008 The Semantic Web will only be a reality if we can create structured unambiguous ontologies that model domain knowledge that computers can handle This book provides automatic extraction and modeling techniques for ontology building     **Semantic Web for the Working Ontologist** James Hendler,Fabien Gandon,Dean Allemang,2020-08-03 Enterprises have made amazing advances by taking advantage of data about their business to provide predictions and understanding of their customers markets and products But as the world of business becomes more interconnected and global enterprise data is no long a monolith it is just a part of a vast web of data Managing data on a world wide scale is a key capability for any business today The Semantic Web treats data as a distributed resource on the scale of the World Wide Web and incorporates features to address the challenges of massive data distribution as part of its basic design The aim of the first two editions was to motivate the Semantic Web technology stack from end to end to describe not only what the Semantic Web standards are and how they work but also what their goals are and why they were designed as they are It tells a coherent story from beginning to end of how the standards work to manage a world wide distributed web of knowledge in a meaningful way The third edition builds on this foundation to bring Semantic Web practice to enterprise Fabien Gandon joins Dean Allemang and Jim Hendler bringing with him years of experience in global linked data to open up the story to a modern view of global linked data While the overall story is the same the examples have been brought up to date and applied in a modern setting where enterprise and global data come together as a living linked network of data Also included with the third edition all of the data sets and queries are available online for study and experimentation at data world swwo     [Bridging the Ontological Gap Between Semantic Web and the RESTful Web Services](#) Yuan Jin,2010     [Completion of Ontologies and Ontology Networks](#) Zlatan Dragisic,2017-08-22 The World Wide Web contains large amounts of data and in most cases this data has no explicit structure The lack of structure makes it difficult for automated agents to understand and use such data A step towards a more structured World Wide Web is the Semantic Web which aims at introducing semantics to data on the World Wide Web One of the key technologies in this endeavour are ontologies which provide a means for modeling a domain of interest and are used for search and integration of data In recent years many ontologies have been developed To be able to use multiple ontologies it is necessary to align them i e find inter ontology relationships However developing and aligning ontologies is not an easy task and it is often the case that ontologies and their alignments are incorrect and incomplete This can be a problem for semantically enabled applications Incorrect and incomplete ontologies and alignments directly influence the quality of the results of such applications as wrong results can be returned and correct results can be missed This thesis focuses on the problem of completing ontologies and ontology networks The contributions of the thesis are threefold First we address the issue of completing the is a structure and alignment in ontologies and ontology networks We have formalized the problem of completing the is a structure in ontologies as an abductive reasoning problem and developed algorithms as well as systems

for dealing with the problem With respect to the completion of alignments we have studied system performance in the Ontology Alignment Evaluation Initiative a yearly evaluation campaign for ontology alignment systems We have also addressed the scalability of ontology matching which is one of the current challenges by developing an approach for reducing the search space when generating the alignment Second high quality completion requires user involvement As users time and effort are a limited resource we address the issue of limiting and facilitating user interaction in the completion process We have conducted a broad study of state of the art ontology alignment systems and identified different issues related to the process We have also conducted experiments to assess the impact of user errors in the completion process While the completion of ontologies and ontology networks can be done at any point in the life cycle of ontologies and ontology networks some of the issues can be addressed already in the development phase The third contribution of the thesis addresses this by introducing ontology completion and ontology alignment into an existing ontology development methodology
